LETTER FROM THE SCIENTIFIC MANAGEMENT

LETTER FROM THE SCIENTIFIC MANAGEMENT

This year, IBIMA has consolidated our multidisciplinary character and strengthened our commitment to care with the aim of directly transferring scientific advances to the improvement of healthcare. One example of this is the celebration of the Primary Care Day and Care Day, meeting points for the promotion of innovation in daily clinical practice.

IBIMA Plataforma BIONAND's plan, which is in its fifth edition in 2024, has become one of the most highly valued initiatives by the Institute's professionals. This program reflects our firm commitment to promoting scientific quality, the transfer of results, and the visibility of the work carried out by our research groups.

IBIMA Plataforma BIONAND's scientific production continues to grow, with more than 884 scientific articles (773 original works and 111 reviews) in JCR indexed journals and 32 clinical practice guidelines and consensus documents and an increasing percentage of open access publications (77% in total). This contributes to the impact and visibility of research, thus promoting scientific collaboration. In addition, the percentage of publications in Q1 journals has increased from 45% in 2023 to 65% in 2024.

In terms of funding, we have been awarded €32 million for health research projects, an increase of €2 million over 2023. During the fiscal year, 366 projects funded in regional, national, and international competitive calls for proposals were conducted and funding was obtained for 69 new projects.

In the international scope, we obtained €2.4 million in European calls for proposals and were awarded two new Marie Skłodowska-Curie Actions

(MSCA-PF) grants, reinforcing our commitment to attracting talent. In addition, we actively participate in 8 RICORS networks, 34 COST actions, 7 CIBER, and 4 platforms of the Carlos III Institute of Health.

Another strategic area that is experiencing clear growth is clinical trials. There were 1,286 active studies in 2024, an increase of 7% over the previous year.

This year has also been marked by the celebration of emblematic scientific, institutional, and social initiatives. These included the Farmaindustria Conference, the recognition obtained with the Unicaja Foundation Award for Innovation in Biomedicine and Health, and the II IBIMA Plataforma BIONAND Soccer Tournament which, together with the I Charity Run against Obesity, raised close to €30,000 to promote new research projects.

Our commitment to society has also materialized in outreach and open doors days. We have welcomed schoolchildren, professionals, patient associations, and biotechnology companies with the aim of bringing science closer to the public and involving them in the work carried out in our laboratories and scientific platforms.

In conclusion, 2024 has been a year of consolidation and growth for IBIMA Plataforma BIONAND. Thanks to our joint efforts, we continue to set new objectives and goals that will allow us to maintain our position as a benchmark health research institute with a cutting-edge, innovative approach that is focused on a real impact on people's health.

Francisco J. Tinahones Madueño
Scientific Director of IBIMA Plataforma BIONAND

INTRODUCTION

1

The following report summarizes the scientific activity conducted by the Biomedical Research Institute of Málaga and Nanomedicine Platform, IBIMA Plataforma BIONAND, in 2024.

The institute's **mission** is to **develop and promote a multidisciplinary scientific space** for R&D&i of excellence in the field of biomedicine and nanomedicine aimed at industrial transfer and the translation into clinical practice in Málaga. The institute is centered around the Regional and Virgen de la Victoria University Hospitals in Málaga together with primary care centers and University of Málaga biotechnology groups.

It is the institute's intention to **integrate** the talent, structures, and centers dedicated to biomedical research in order to promote scientific and technological **innovation, inspire** the research callings of new professionals, attract talent, and provide training.

The **vision** of IBIMA Plataforma BIONAND **as a biomedical research institute is to be a proactive and innovative organization, a national and European point of reference that aims to offer the best possible research at all times.** This vision means the institute is:

- Focused on the organization and structuring of the research system, with knowledge applied to health at the center of the system.
- Attentive to the reality that surrounds the institute in order to take advantage of the possibilities for development arising from the opportunities that surround it and to successfully face threats by joining European knowledge and development networks.
- Actively involved in achieving the sustainability of the system, characterized by quality, efficiency, and effectiveness.
- Willing to continuously incorporate innovation (social, organizational, and technological) as an element of efficiency and good results from the Institute.
- Integrated among all the agents involved in the health and research systems with its own identity that is in consonance with the rest of the agents.

The IBIMA Plataforma BIONAND has been accredited as a Health Research Institute by the Carlos III Institute of Health since January 15, 2015 and was reaccruited on January 15, 2025 according to Royal Decree 279/2016, of June 24. The legal ownership of the institute belongs to the Foundation for Health and Biomedicine Research in Málaga (FIMABIS).

GOVERNING AND ADVISORY BODIES

2

The governing bodies of the IBIMA Plataforma BIONAND institute are the Board of Directors and the Delegated Commission, as collegiate bodies, and the Scientific Directorate, Scientific Vice-Directorate, and Management as individual bodies. The advisory bodies of the institute are the External Scientific Committee, the Internal Scientific Committee, and the Senate.

In addition, various committees have been organized to ensure compliance with the plans and policies approved by the Board of Directors: **Training and Postgraduate Commission, Innovation Commission, Quality Commission, Infrastructure Commission, and Equality Commission.**

The IBIMA Plataforma BIONAND **Board of Directors** is the institute's highest governing body. Its nature and role are defined by the Collaboration Agreement between the Regional Ministry of Health and Consumer Affairs; the Regional Ministry of Economic Transformation, Industry, Knowledge, and Universities; the University of Málaga; the Andalusian Health Service; and the Andalusian Public Foundation FIMABIS for the conduct of biomedical research in Málaga that was signed on December 30, 2021. The Board of Directors comprises the following members:

- Two representatives from the Regional Ministry of Health and Consumer Affairs of the Autonomous Government of Andalusia.
- Two representatives from the Regional Ministry of Economic Transformation, Industry, Knowledge, and Universities of the Regional Government of Andalusia, one of which belongs to the Andalusian Health Service.
- Two representatives from the University of Málaga.

The Scientific Directorate, the Scientific Vice-Directorate, and the Management of the IBIMA Plataforma BIONAND as well as a representative of the Andalusian Public Foundation for Progress and Health, as the central research support and management entity of the Regional Ministry of Health and Consumer Affairs, will be non-voting members in order to coordinate with the general and sectoral strategies for research, development, and innovation.

The **Delegated Commission** is an entity aimed at providing the institute with greater agility in decision-making in the periods between Board of Directors meetings. It was created by virtue of a resolution of the Board of Directors dated 11/24/2014. It comprises the following members:

- A representative of the Regional Ministry of Health and Consumer Affairs of the Autonomous Government of Andalusia or, if applicable, the regional ministry with authority in health matters, designed by the person in charge of the regional ministry.
- A representative of the Regional Ministry of Universities, Research, and Innovation of the Autonomous Government of Andalusia or, if applicable, the regional ministry with authority in research matters, designed by the person in charge of the regional ministry.
- A representative of the University of Málaga appointed by the Dean of the University of Málaga.

The Scientific Directorate, the Scientific Vice-Directorate, and the Management of the IBIMA Plataforma BIONAND as well as a representative of the Andalusian Public Foundation for Progress and Health will be non-voting members.

The **External Scientific Committee** is an advisory body for the institute that oversees its scientific quality and advises the Scientific Directorate and the Board of Directors, with independent judgment and autonomy for decision-making. It is formed of highly qualified professionals with recognized experience in the field of research.

The External Scientific Committee was proposed and approved at the institute's first Board of Directors meeting in July 2012 and was updated in 2024. Current members include:

- **Carlos Diéguez González.** Full Professor of Physiology. University of Santiago de Compostela. Chair.
- **Mariano Esteban Rodríguez.** Department of Molecular and Cellular Biology. National Centre for Biotechnology (CSIC).
- **Rafael Bañares Cañizares.** Chief of the Gastrointestinal Medicine Department. Gregorio Marañón University General Hospital. Madrid. Former Scientific Director of the Gregorio Marañón Health Research Institute (2011-2015)
- **Pablo Lapunzina Badía.** Coordinator of the Institute of Medical and Molecular Genetics (INGEMM) of the La Paz University Hospital Research Institute (IdiPaz) and Scientific Director of CIBER-ER.
- **Eva Carmona Porquera.** Researcher at the Mayo Clinic. Rochester, Minnesota, USA.
- **María Vallet Regí.** Full Professor of Inorganic Chemistry and Director of the Department of Inorganic and Bioinorganic Chemistry, School of Pharmacy, Complutense University of Madrid.
- **Pilar Marco Colás.** Institute for Advanced Chemistry of Catalonia (IQAC, CSIC, Barcelona).
- **Jesús Jiménez Barbero.** Institute of Organic Chemistry of the CSIC and Scientific Director of the Center for Cooperative Research in Biosciences (CIC bioGUNE, Bilbao, Spain).
- **Laura Lechuga Gómez.** Catalan Institute of Nanoscience and Nanotechnology (ICN2), CSIC, BIST, and CIBER-BBN.
- **Lina Badimon.** Cardiovascular Research Center CSIC-ICCC, Santa Creu i Sant Pau Hospital, (CIC, Barcelona).
- **Luis García Ortiz.** Scientific Director of the Biomedical Research Institute of Salamanca (IBSAL), Primary Care Research Unit of Salamanca (APISAL).

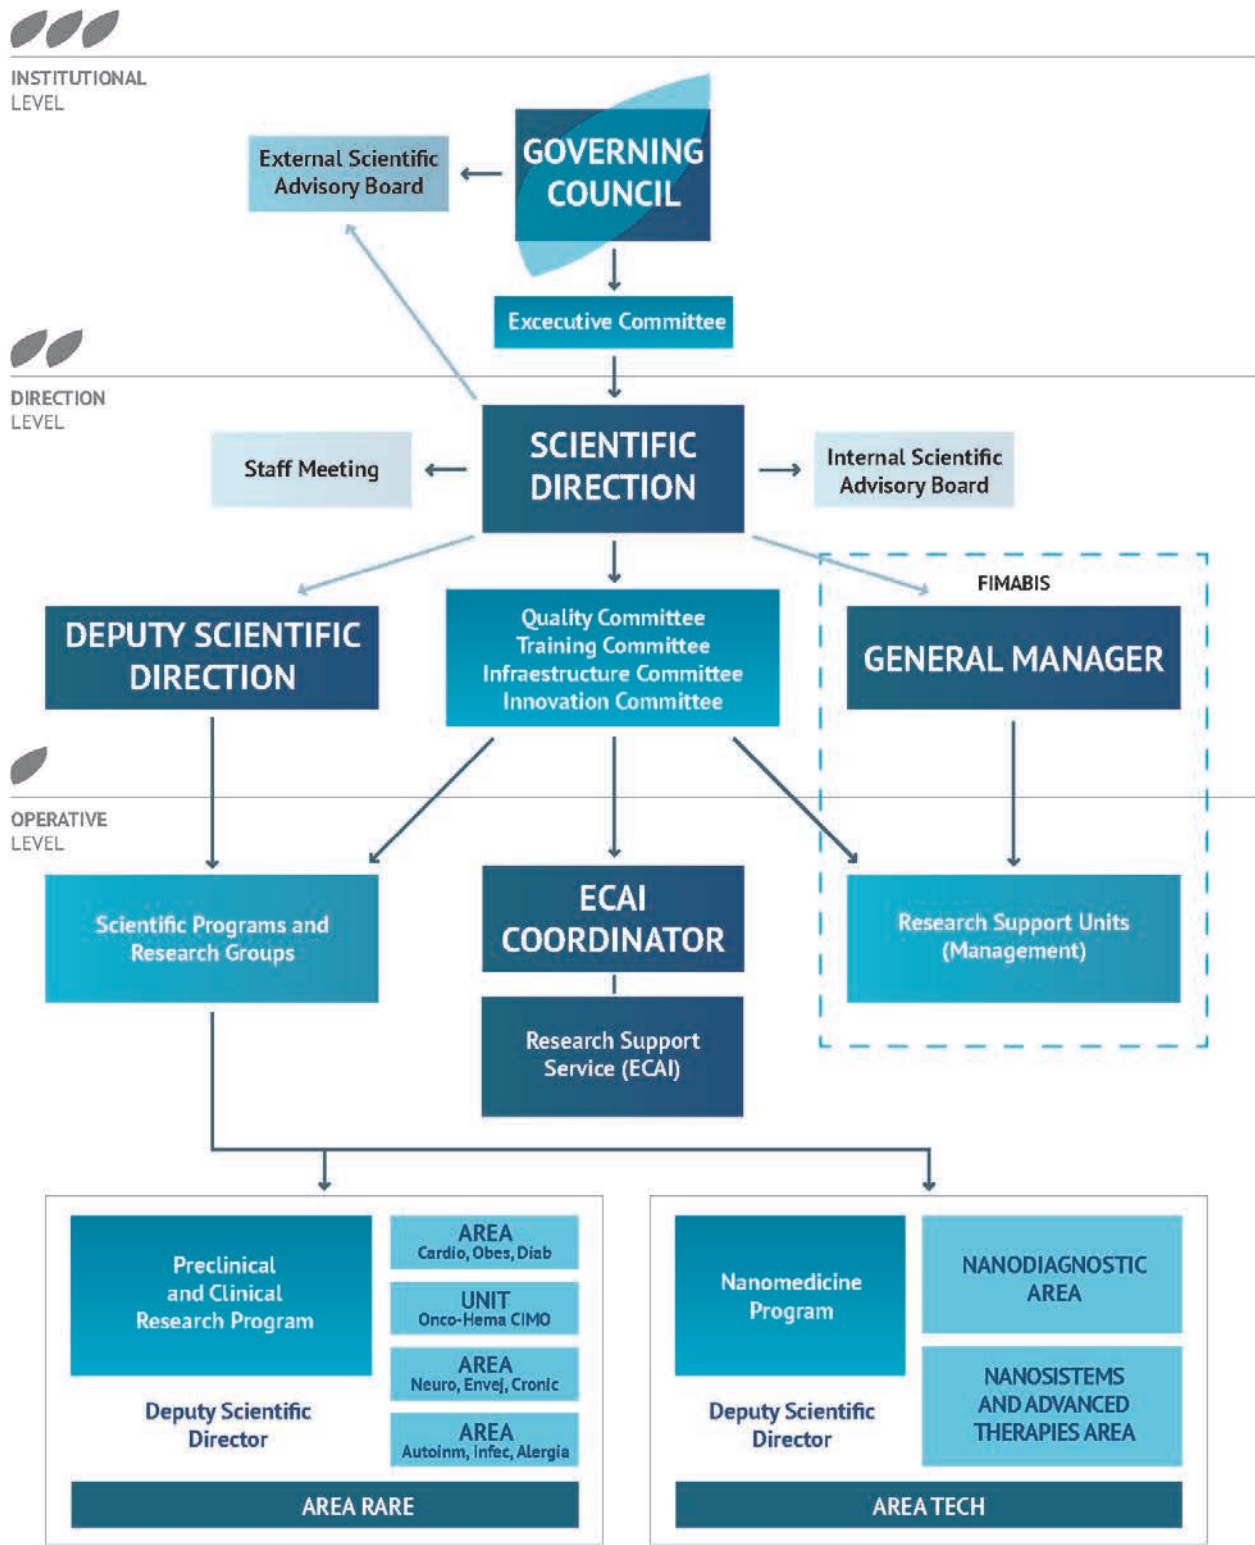

The **Internal Scientific Committee** is an advisory body to the Scientific Directorate on all scientific and organizational matters at the institute. Its decisions are non-binding. It is constituted at the proposal of the Scientific Directorate and ratified by the Board of Directors. It includes the following members:

- Scientific Directorate of IBIMA Plataforma BIONAND.
- Scientific Vice-Directorate of IBIMA Plataforma BIONAND.
- Management of IBIMA Plataforma BIONAND.
- A representative from the Virgen de la Victoria University Hospital management and a representative from the Regional University Hospital of Málaga management.
- A representative from the University of Malaga.
- A representative from Primary Care.
- The coordinators of the IBIMA Plataforma BIONAND scientific areas.
- A representative from the Training and Postgraduate Commission.
- A representative from the Quality Commission.
- A representative from the postdoctoral researchers and a representative of the predoctoral researchers.
- A representative of the technical staff of the research support units.

ORGANIZATIONAL STRUCTURE

3

The IBIMA Plataforma BIONAND institute is divided into 2 research programs; 7 scientific areas, 2 of which are multidisciplinary; and one research unit. The organization chart is as follows:

3.1. SCIENTIFIC AREAS & RESEARCH UNITS

Preclinical and Clinical Research Program:

- Area 1. **Cardiovascular diseases, obesity, and diabetes. Environmental Determinants and Lifestyle.**
Coordinator. Ricardo Gómez Huelgas
Deputy Coordinator. M. Rosa Bernal López
- CIMO Onco-Hematology Unit
Coordinator. Melissa García Caballero
Deputy Coordinator. Elisa Matas Rico
- Area 3. **Neurosciences, Chronicity, Aging, and Health in Vulnerable Populations.**
Coordinator. Antonia Serrano Criado
Deputy Coordinator. Patricia Moreno Peral
- Area 4. **Autoimmune diseases, infectious diseases, inflammation, and allergies.**
Coordinator. Lina Mayorga Mayorga
Deputy Coordinator. Natalia Mena Vázquez

Nanomedicine Research Program:

- Area 7. **Nanodiagnostics.**
Coordinator. María Luisa García Martín
- Area 8. **Nanosystems and Advanced Therapies.**
Coordinator. Elena González Muñoz

and two multidisciplinary areas:

- Area 5. **Rare: Rare diseases.**
Coordinator. Raquel Yahyaoui Macias
Deputy Coordinator. Juan Antonio García Ranea
- Area 6. **Tech: Health Technology and Innovation Area.**
Coordinator. Antonio I. Cuesta Vargas
Deputy Coordinator. Francisco Ángel Moreno Dueñas

These areas comprise the 78 research groups that formed the Institute in 2024: 47 consolidated, 21 emerging, and 10 associated research groups from the different institutions that make up the IBIMA Plataforma BIONAND. In addition, 7 associated external groups participate.

The distribution of the groups by areas and categories is as follows:

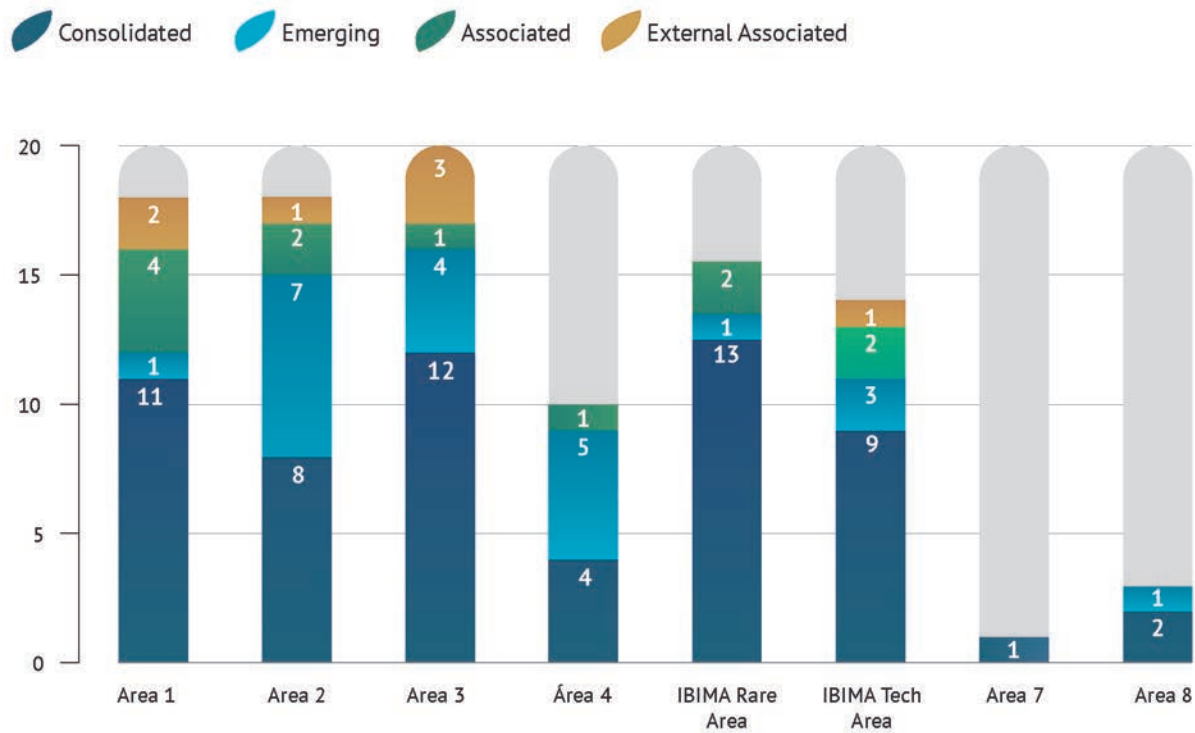

Figure 1: Consolidated, emerging, and associated groups by scientific areas

The list of each research area and group with their Lead Researchers (LR) and Co-Lead Researchers (Co-LR) are as follows:

The **objectives of the scientific areas** and their research groups are explained in the 2023-2027 strategic plan and in the cooperative scientific plan with the general objective of fostering synergies between the institute's research groups by promoting inter-institutional, inter-area, and intra-area collaboration.

The IBIMA Plataforma BIONAND areas have proposed the following specific objectives:

- Increase scientific production and the conduct of projects resulting from collaboration among the Institute's groups.
- Promote collaborative translational research with results close to the market.
- Comply with new strategies and policies on Open Science.

The extent to which the annual objectives have been met is measured every six months and submitted to the Board of Directors. The following sections of this report describe the results achieved for the year 2024.

3.2. HUMAN RESOURCES

In 2024, the IBIMA staff consisted of a total of 1,443 professionals, including researchers (1,214), support technicians (191), and managers (38).

DISTRIBUTION OF PERSONNEL BY GENDER

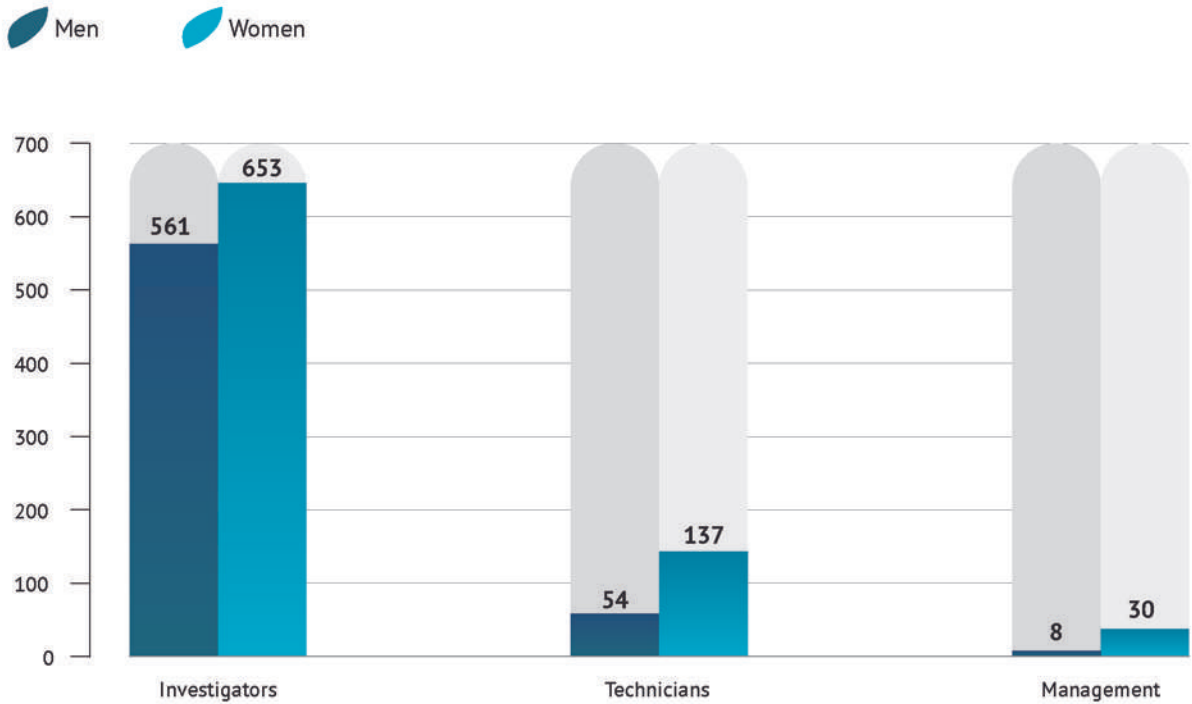

Figure 2: Number of professionals by category and gender in 2024

PERSONNEL BY CATEGORY

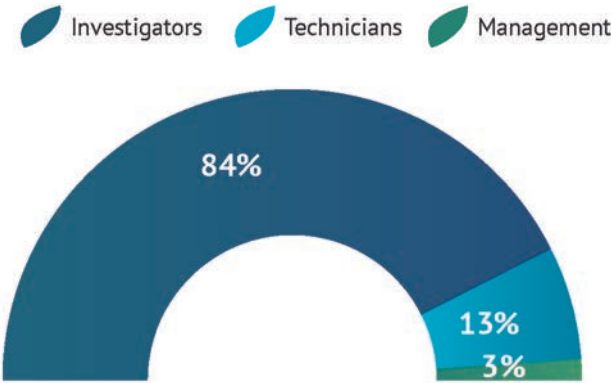

Figure 3: Percentage of professionals by category in 2024

In 2024, IBIMA Plataforma BIONAND implemented the actions planned according to its Human Resources Strategy for Researchers (HRS4R). The strategy was launched 2017 after obtaining the “HR Excellence in Human Resources” recognition awarded by the European Commission.

HR EXCELLENCE IN RESEARCH

IBIMA's HRS4R action plan is aligned with the principles of the European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers with the aim of improving the working and employment conditions of researchers with open, transparent, and merit-based recruitment and hiring practices.

The distribution of IBIMA Plataforma BIONAND personnel by gender and category and according to the European classification of research profiles R1 – R4 (<https://euraxess.ec.europa.eu/europe/career-development/training-researchers/research-profiles-descriptors>) is as follows:

IBIMA PERSONNEL

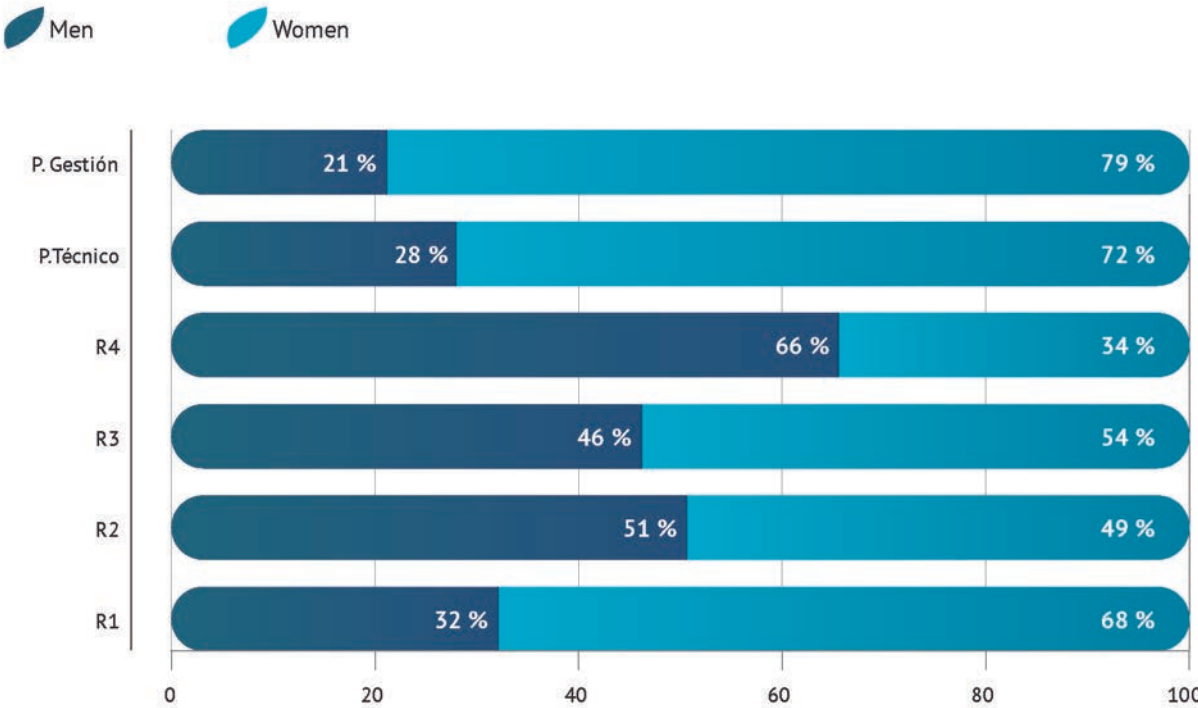

Figure 4: IBIMA Plataforma BIONAND personnel in 2024 by category (Euraxess) and gender

Of the 1,214 researchers who formed part of the Institute in 2024, 208 were R1 researchers, 173 were R2 researchers, 705 were R3 researchers, and 128 were R4 researchers, according to the European classification of research profiles. Of the total, 46% (561) were men and 54% (653) were women.

The institute's management personnel are organized into **Research Support Units (RSU)**, whose functions include supporting the institute's scientific objectives through its managing entity FIMABIS:

- Advisory service for fundraising and establishing collaborations.
- Fund management service for R&I activities.
- International project advisory service.
- Clinical trials management service.
- Methodological and statistical support service.
- Advisory and management service for the protection, transfer, and dissemination of results.
- Communication to society and event coordination.
- Management of healthcare research centers and institutes linked to the Andalusian Public Healthcare System.

SCIENTIFIC ACTIVITY AND PRODUCTION. OVERALL DATA

4

4.1. SCIENTIFIC PRODUCTION. BIBLIOMETRIC INDICATORS

To calculate the bibliometric indicators published in this report, only original research articles and review articles published in journals with an impact factor that are indexed in the 2023 edition of the Journal Citation Report (JCR), the most recent edition available at the time of writing this report, have been considered. All other types of documents, including editorial material, letters, meeting abstracts, erratum, and advance publications (in press online ahead of print and early access), have been excluded.

The evolution of overall scientific production from the IBIMA Plataforma BIONAND over the last 5 years is shown in the following figure. It includes the number of publications according to the type of document. An upward trend can be observed, with 884 publications from the institute in 2024: 773 original articles and 111 reviews.

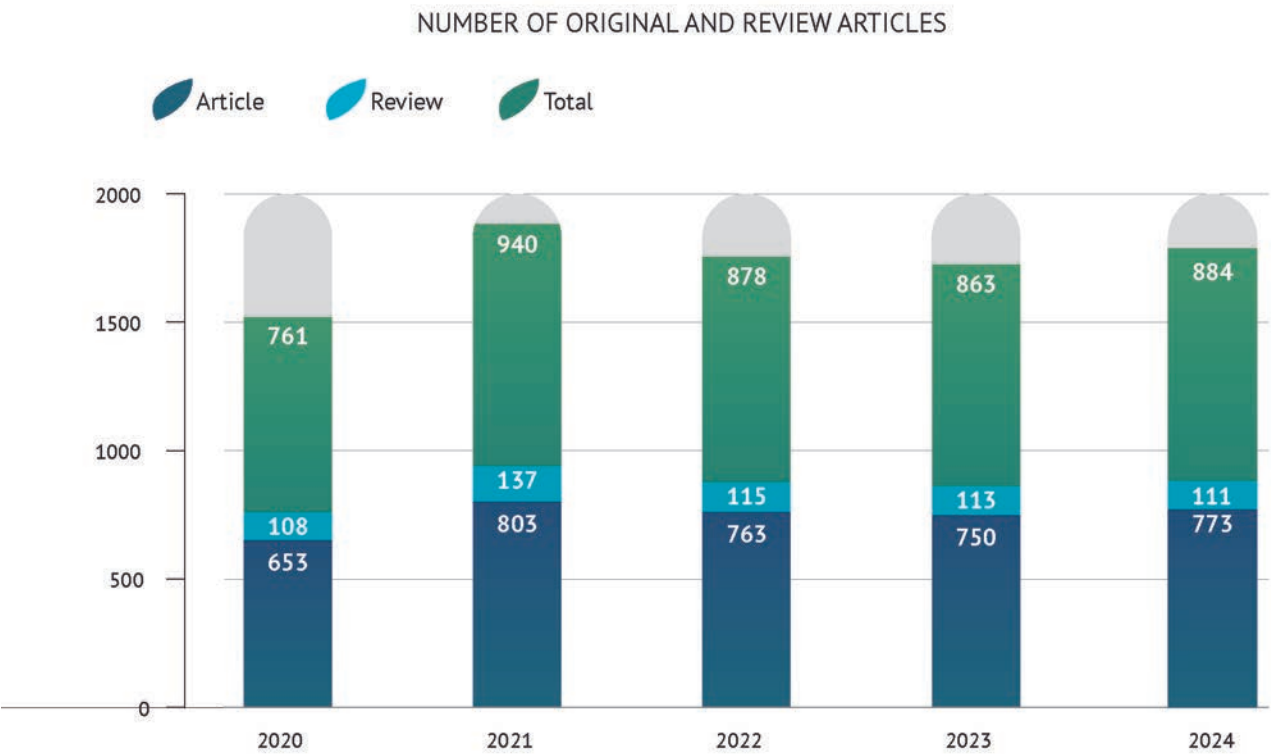

Figure 9: Changes in the number of publications by document type in the last five years

The percentage of each type of document in 2024 is shown in the following figure. Original articles represent 87% of the institute's scientific production and the rest are review articles:

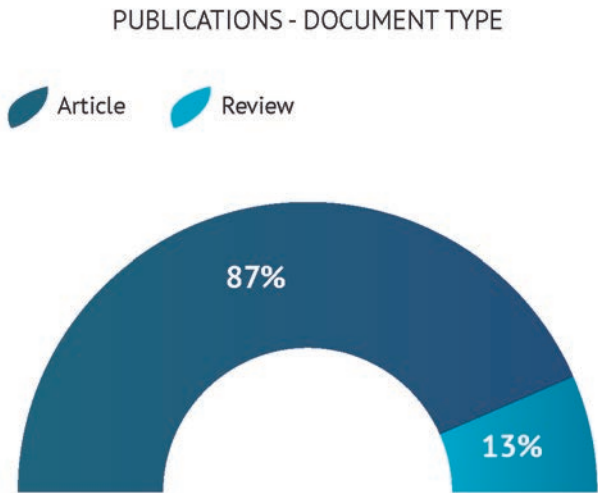

Figure 10: Percentage of publications by document type

On the other hand, regarding the position of the publications in the JCR subject category in which they are indexed, following figure shows the percentage of publications in first quartile (Q1) and first decile (D1) scientific journals in the last five years. A considerable increase in Q1 publications is observed, from 45% in 2023 to 65% in 2024.

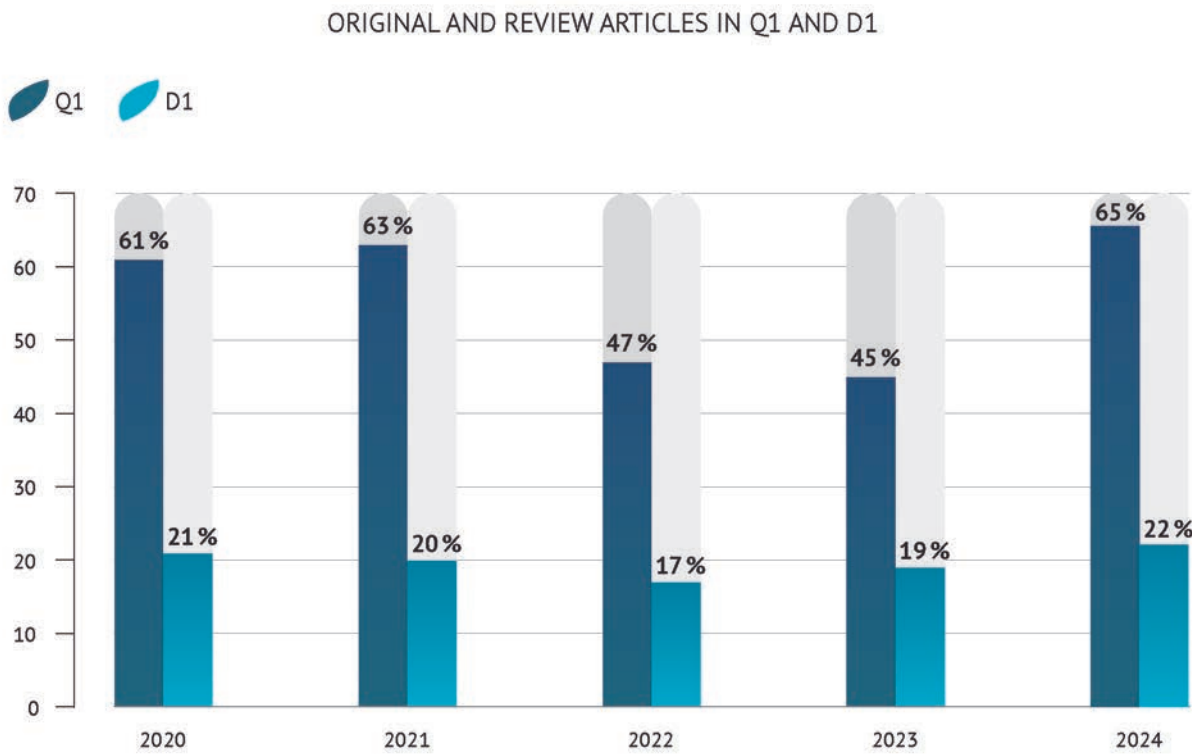

Figure 11: Change in the percentage of first quartile (Q1) and first decile (D1) publications

The distribution of the number of publications by quartile is shown below. Of them, 88% were published in first quartile (Q1) and second quartile (Q2) journals.

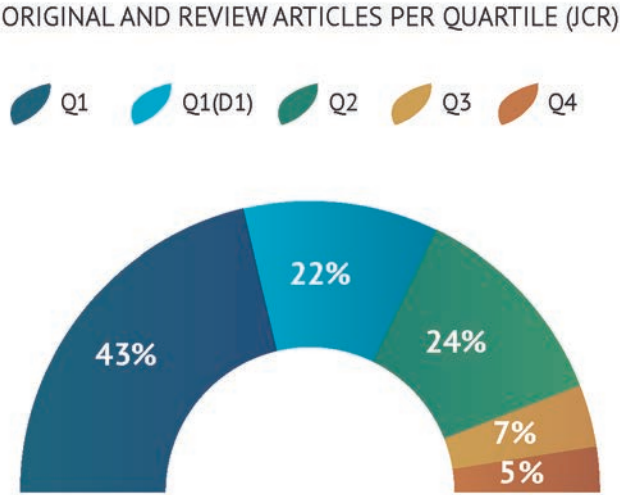

Figure 12: Publications by quartiles

The percentage of Open Access publications in 2024, considering the gold, green, hybrid and bronze pathways, was 77%.

Leadership

Forty-six percent of scientific production was led by IBIMA Plataforma BIONAND researchers and researchers who contributed as first, last, or corresponding author, as shown in the following figure:

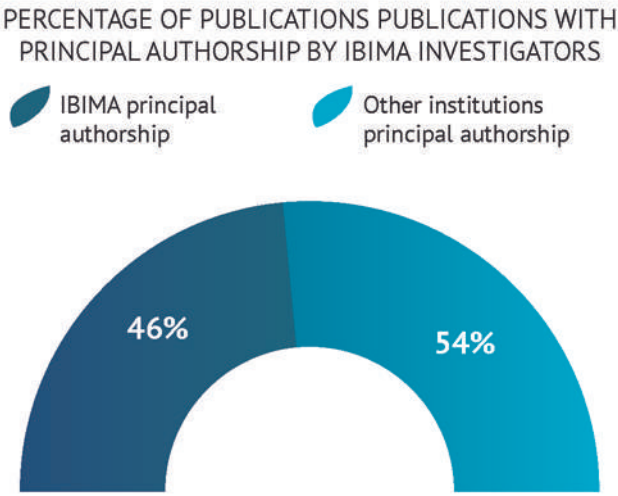

Figure 13: Percentage of publications led by IBIMA researchers.

Changes over the last five years in the percentage of publications led by institute researchers is shown below

PUBLICATIONS WITH FIRST AUTHORSHIP (FIRST, LAST, OR CORRESPONDING AUTHOR) BY IBIMA PLATAFORMA BIONAND INVESTIGATORS

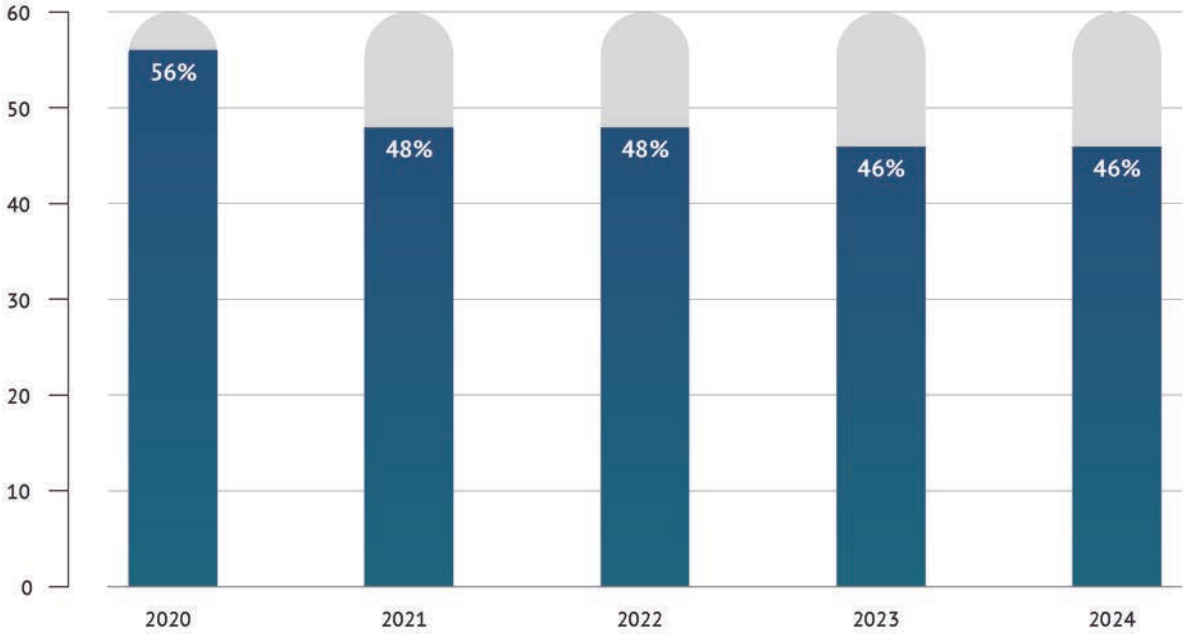

Figure 14: Change in the percentage of publications led by IBIMA researchers in the last five years

Impact Factor

To calculating the Impact Factor (IF), only **original research articles and review articles** were considered. Collaborative publications among different groups and/or areas of the institute were only counted once for the overall calculation.

The Institute's cumulative impact factor in 2024 was 5,083 points. The changes over the last 5 years are shown in the following figure:

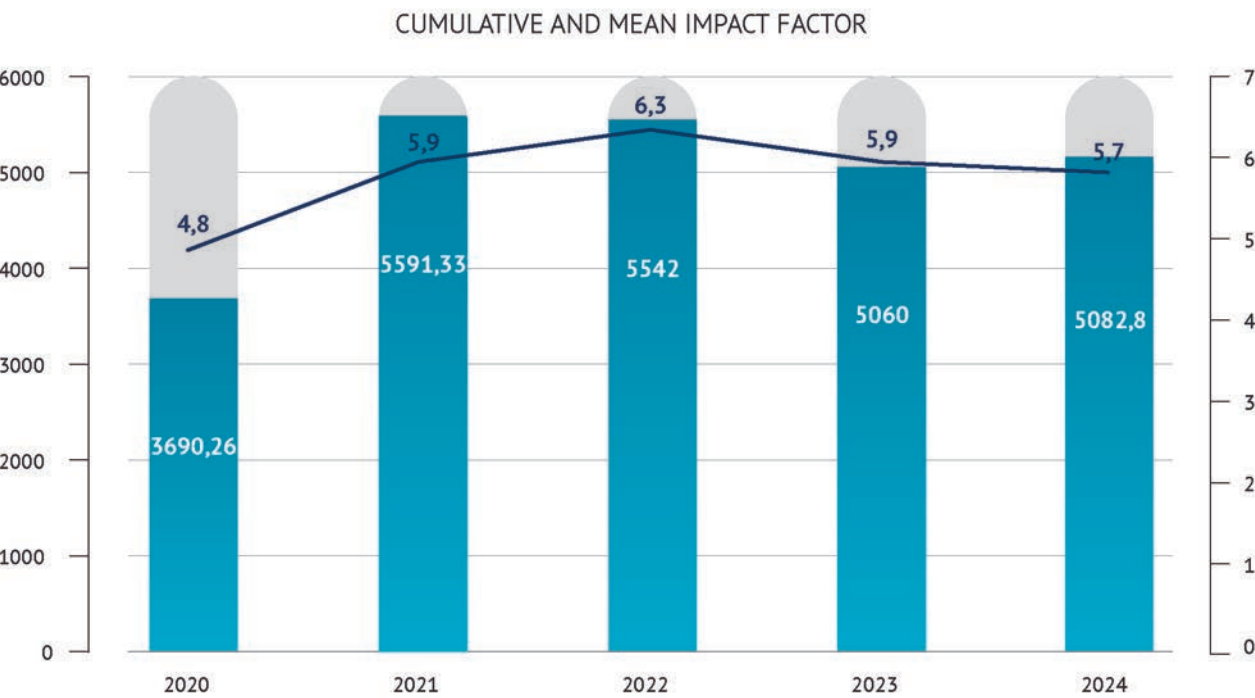

Figure 15: Changes in cumulative impact factor.

Collaborations

The following figure shows the percentage of publications by IBIMA Plataforma BIONAND researchers published in collaboration with other researchers from national institutions outside of Andalusia (national collaborations) and institutions of other nationalities (international).

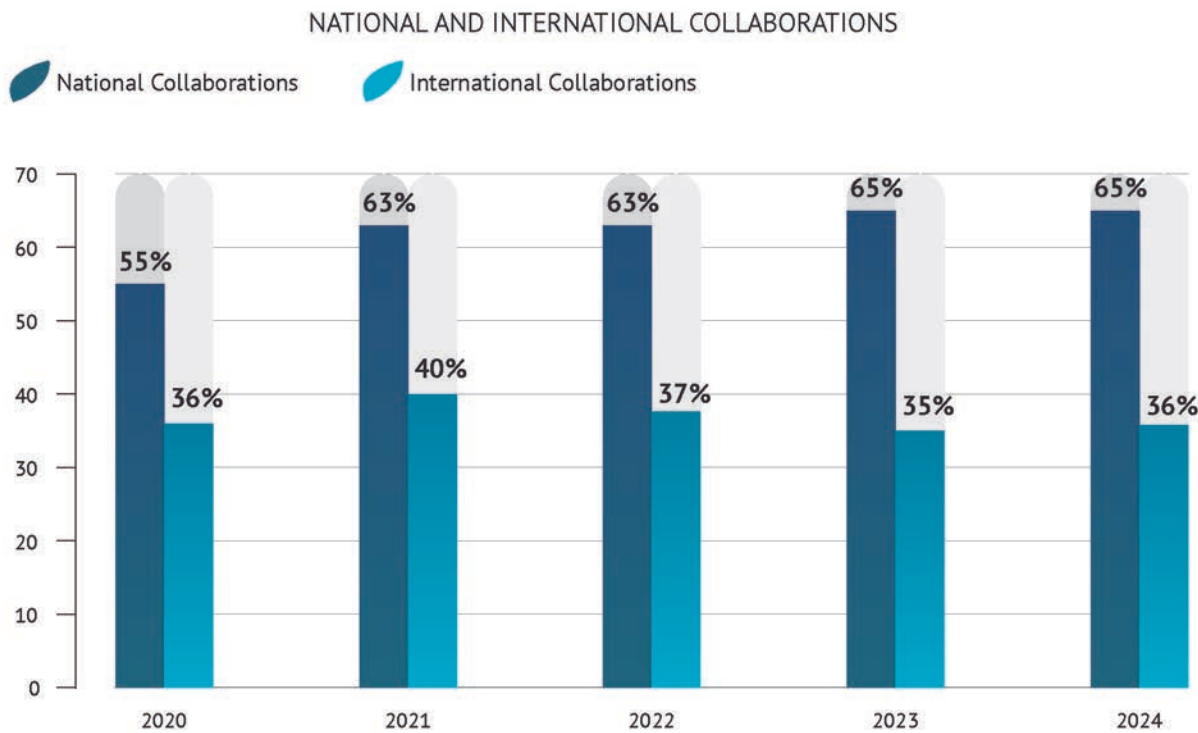

Figure 16: Change in the percentage of scientific production according to national and international collaboration.

On the other hand, the percentage of publications from intra-institute collaborations among the different research groups and institutions that make up the IBIMA Plataforma BIONAND is shown in the following figure:

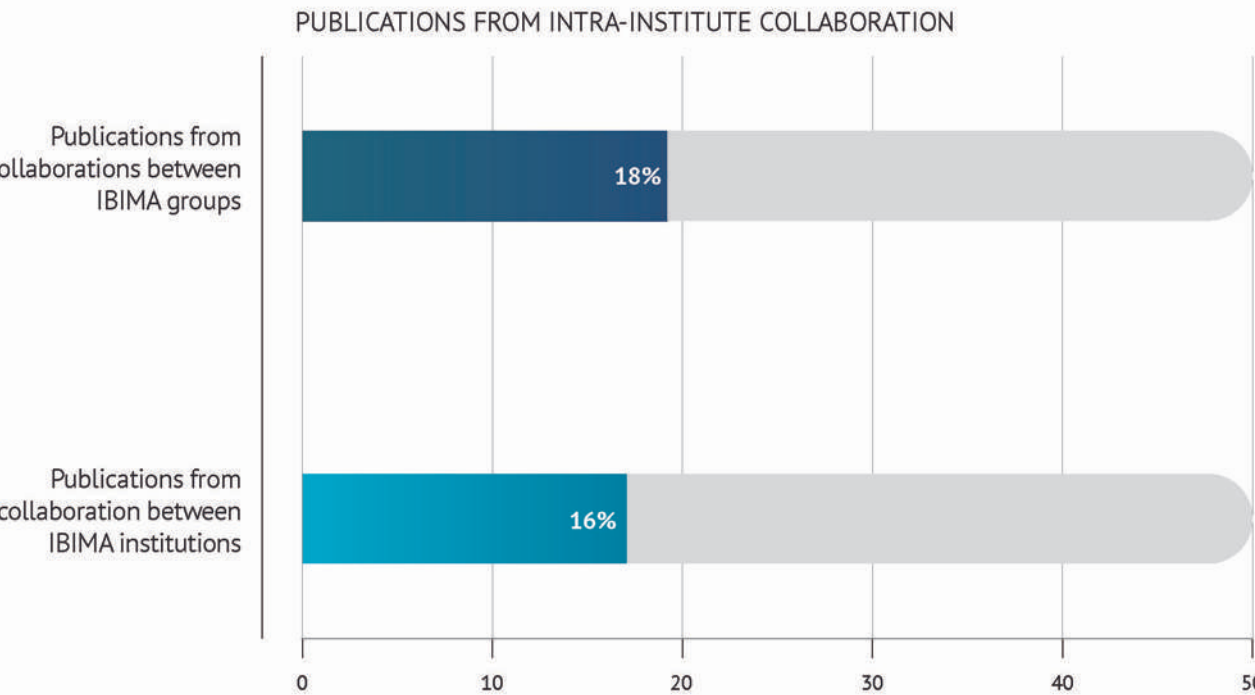

Figure 17: Percentage of publications produced in collaboration among groups and among institutions that make up the IBIMA Plataforma BIONAND.

4.3. RESEARCH PROJECTS

In 2024, 366 research projects funded in regional, national, and international competitive calls were conducted at IBIMA Plataforma BIONAND. Of these, 219 were projects managed directly by FIMABIS as the Institute's managing entity.

Figure 18: Active competitive research projects in 2024

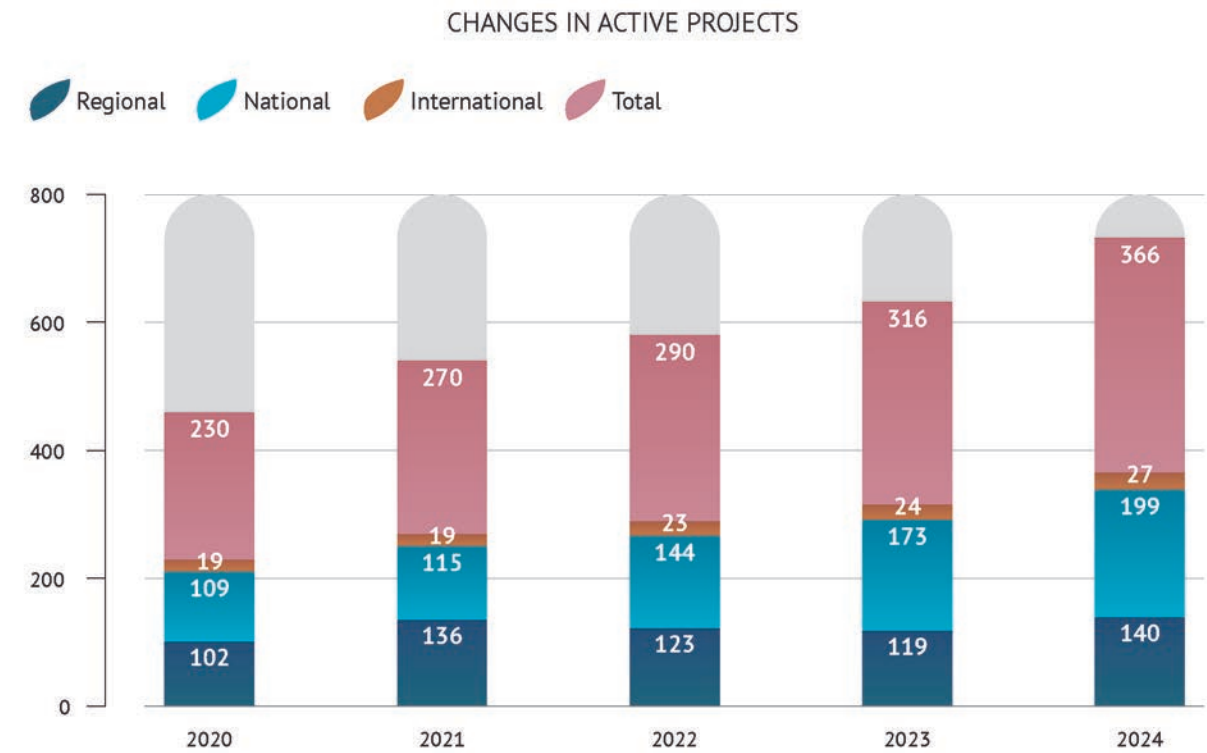

Figure 19: Changes in active competitive research projects at IBIMA 2020–2024

Sixty-nine new competitive projects were awarded to IBIMA Plataforma BIONAND research groups, with a success rate of 30% (69 awarded/226 applied for).

4.6. CLINICAL TRIALS

In 2024, 1286 clinical studies were conducted at IBIMA and 246 new studies were signed:

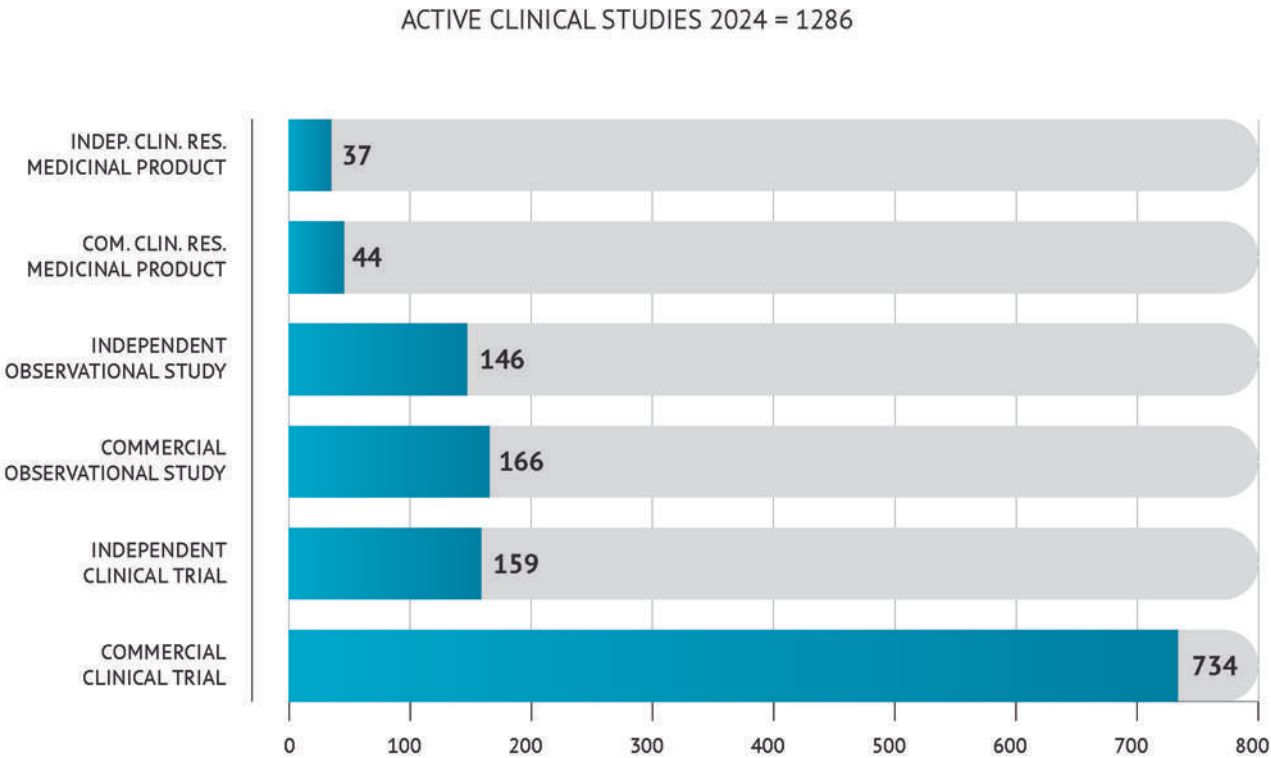

Figure 23: Active Clinical Studies (Clinical Trials and Observational Studies) in 202

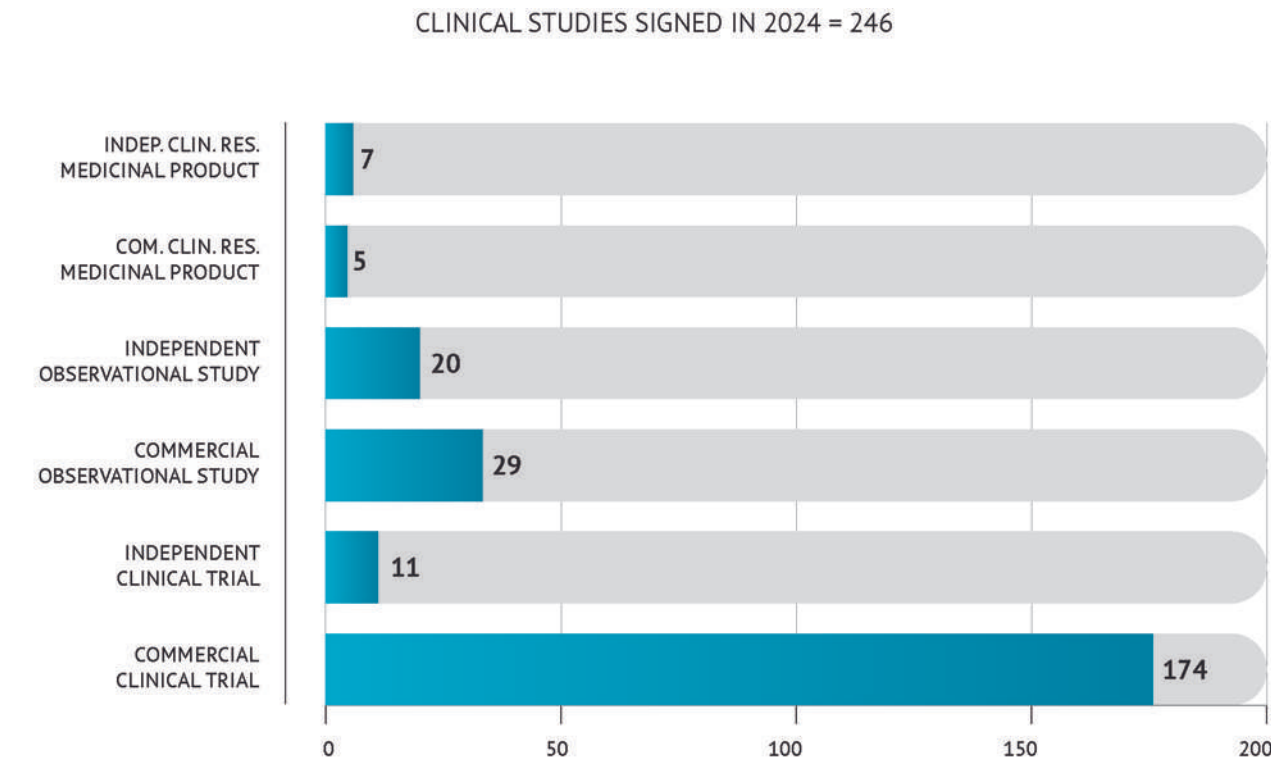

Figure 24: New Clinical Studies (Clinical Trials and Observational Studies) signed in 2024

Of the 1286 clinical studies conducted in 2024, 893 were clinical trials. Of the total of 246 new studies signed, 185 were new trials. The following figures show these active and new clinical trials according to their phase:

INNOVATIONS GENERATED IN 2024

EPIPREDICT

IBIMA Plataforma BIONAND Group: **TRANSLATIONAL RESEARCH IN CANCER IMMUNOTHERAPY AND EPIGENETICS (B-05)**

EPIPREDICT combines epigenetic markers analyzed with software in a liquid biopsy to predict patient response to immunotherapy treatment. This project is currently in TRL 5-6.

PROSAKI: Software that allows automated interpretation of clinical reports.

IBIMA Plataforma BIONAND Group: **Bioinformatics ECAI**

Prosaki is a software for medical use designed in R shiny and optimized to analyze common clinical documents such as admission and discharge summaries in order to detect changes in a patient’s cardiac capacity, identifying possible improvements or deteriorations.

ACTIVE IDEAS

The Innovation and Technology Transfer Unit of IBIMA Plataforma BIONAND had 111 active ideas at different levels of technological maturity at the end of 2024. These ideas represent the collective effort of the Institute’s research groups to generate knowledge with a potential impact on health and society.

Some 35% of the ideas are already on the market. They have been implemented in the healthcare system, licensed to third parties, or made available to the community through open resources such as bioinformatics or patient support tools.

On the other hand, almost 30% of the ideas are in the transfer phase. This implies that they have a result with the potential to be implemented in clinical practice, either directly or through agreements with external agents that continue their development.

In about 10% of cases, the ideas are in the development phase, with an active innovation or technology project underway. Many of these continue to progress, although they are already in the process of being transferred, which highlights the need to advance in parallel along both lines.

Almost 10% of the initiatives are under analysis, either studying their technical feasibility, patentability, or seeking funding to take the next step.

Lastly, 20% of the ideas are still in the data collection phase: the information needed to evaluate them and define their potential is still being gathered.

This mind map reflects IBIMA Plataforma BIONAND’s commitment to the valuation of the knowledge generated with a focus on concrete results that improve people’s health and strengthen collaboration with the business environment.

5.1. PRIORITY SCIENTIFIC AREAS

SCIENTIFIC PRODUCTION

This section shows data on the scientific production of the IBIMA Plataforma BIONAND priority research areas in a disaggregated manner. Collaborative publications among different groups in the same area have only been considered once for the calculation. Area 5 (IBIMA Rare) is multidisciplinary and publications are not included since they are already included in the rest of the areas:

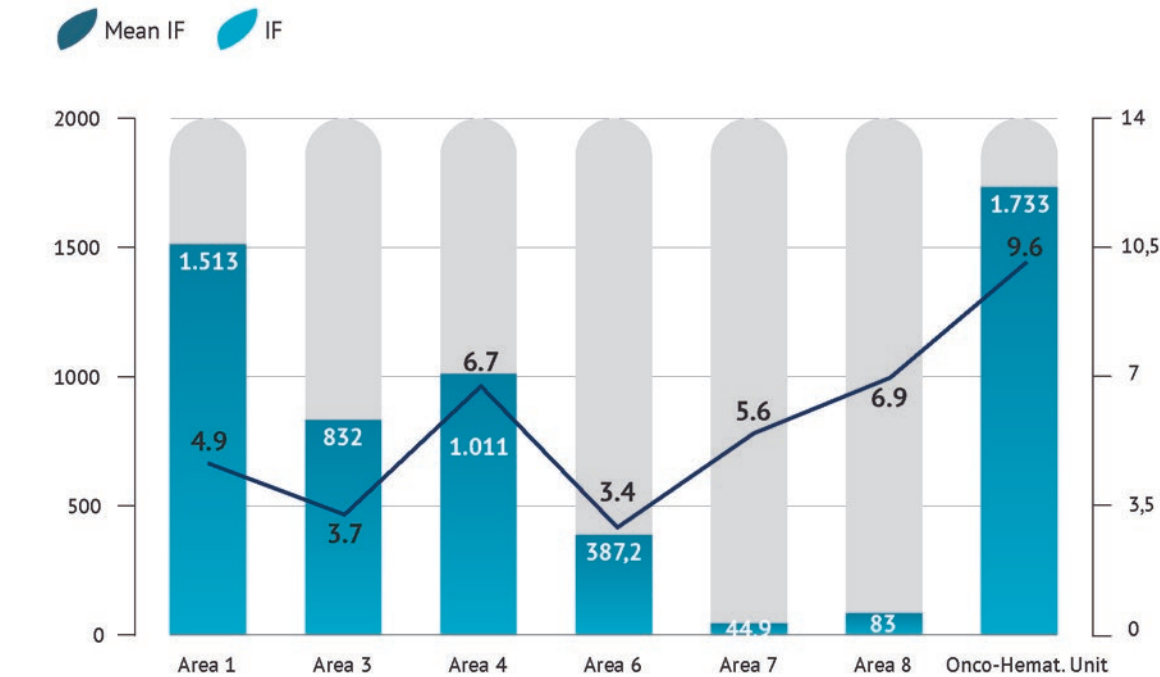

Figure 31: Cumulative and average impact factor by research areas

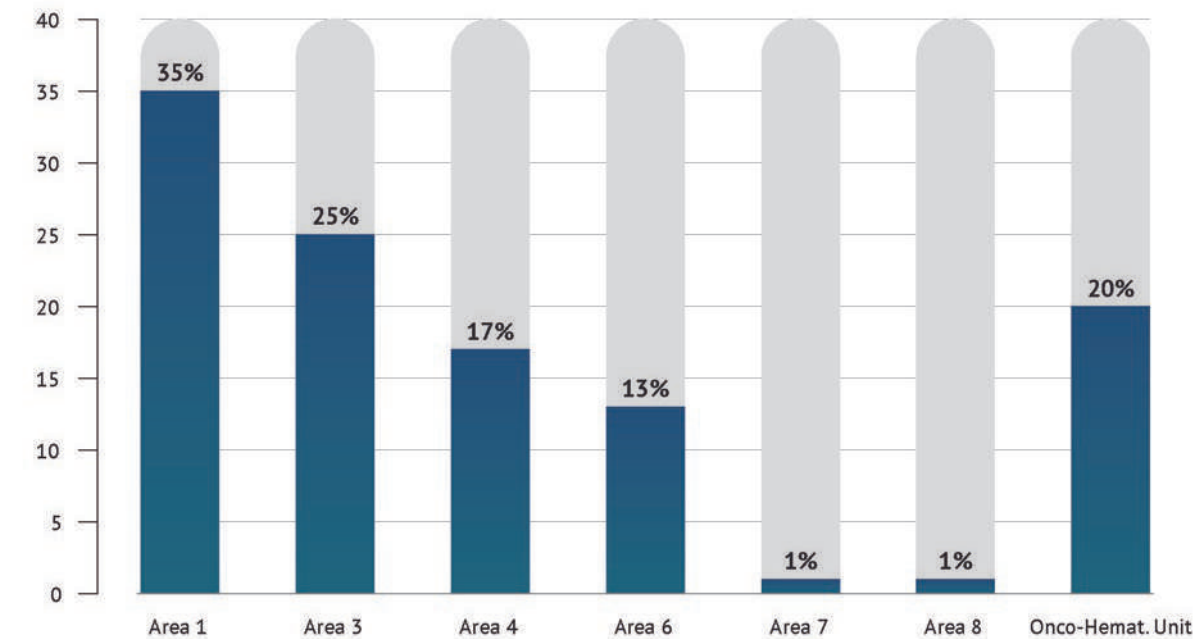

Figure 32: Percentage of publications in each area (original articles and reviews) compared to the institute as a whole

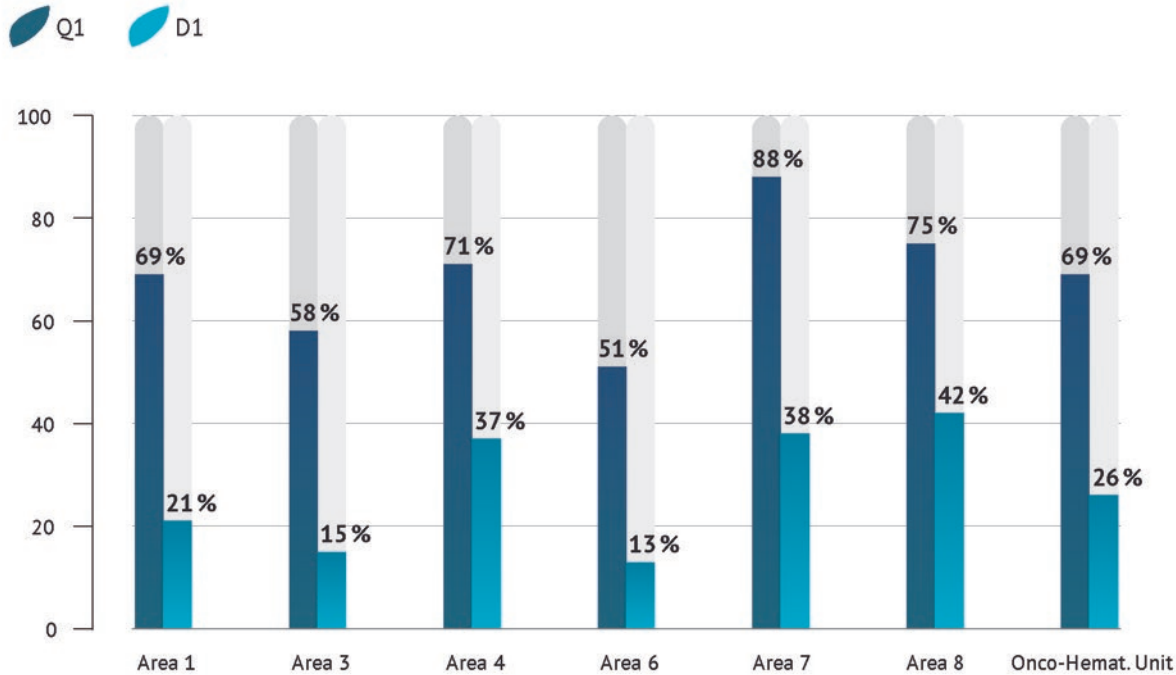

Figure 33: Percentage of publications ranked Q1 and D1 in their category (JCR) by area

ACTIVE PROJECTS

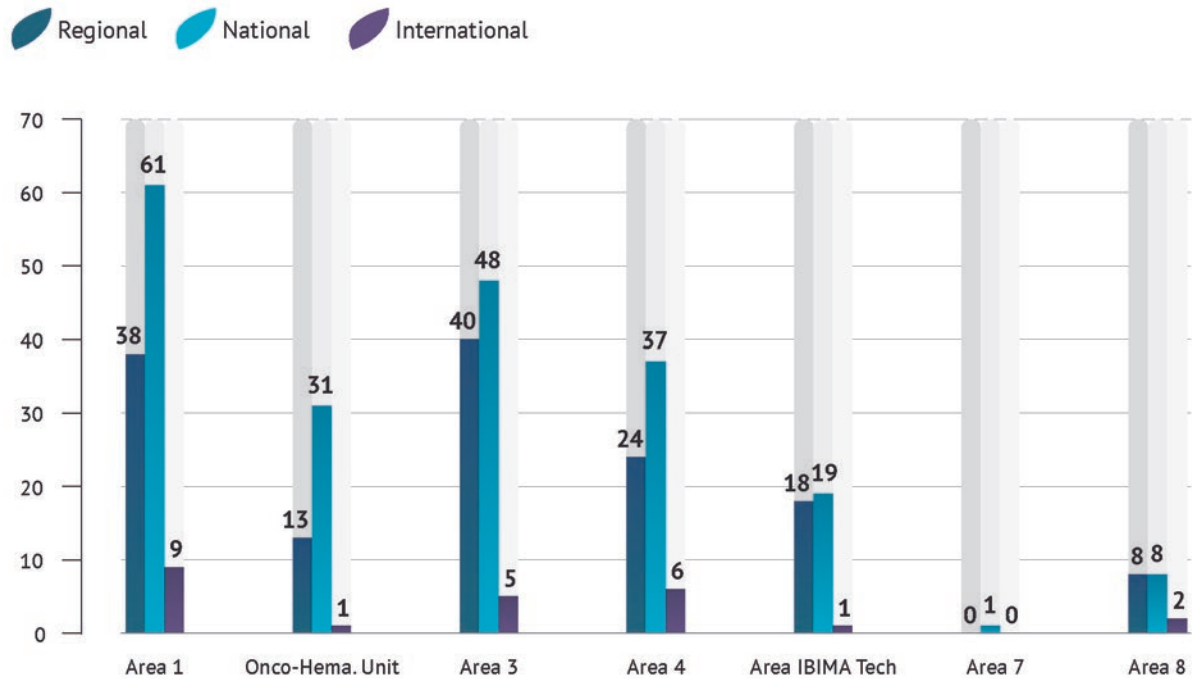

Figure 34: Active competitive research projects at the regional, national, and international level by scientific area/research units

The percentage of competitive research projects in 2024 conducted by each research area/unit is as follows:

Research Area	Total active research projects	% of total research projects
Area 1	108	30%
Onco-Hemat. Unit	45	12%
Area 3	93	25%
Area 4	67	18%
IBIMA Tech Area	38	10%
Area 8	18	5%

IBIMA Rare area is a multidisciplinary area of the IBIMA Plataforma BIONAND formed by groups that also belong to other areas. The area is not included in this last figure and table so as not to distort the total number of active projects.

CLINICAL TRIALS

The clinical trials conducted in each scientific area/research unit of the IBIMA Plataforma BIONAND during the past year are as follows:

AREA 1. CARDIOVASCULAR DISEASES, OBESITY, AND DIABETES. ENVIRONMENTAL DETERMINANTS AND LIFESTYLE

CONSOLIDATED GROUPS

A-01. ENDOCRINOLOGY AND NUTRITION, DIABETES, AND OBESITY
LR Gabriel Olveira Fuster Gabriel. Co-LR Javier Bermúdez Silva

Priority line of research: Obesity, diabetes, and clinical nutrition.

Other lines:

- 1. Obesity and translational diabetes: adipose tissue and beta cell metabolism:
 - Pathophysiology of the pancreatic islet in type 2 diabetes.
 - Prevention of type 2 diabetes and the inflammatory processes that underlie and precede so-called “beta-cell failure”
 - Role of angiogenesis in the regulation of adipose tissue expansion in relation to obesity and type 2 diabetes.
 - Role of angiogenic microRNAs in the regulation of white, brown, and beige adipose tissue functionality
 - Role of microbiota in obesity and type 2 diabetes
 - Study of the cause-effect relationship between obesity and mental illnesses
 - Thymic adipose tissue as a source of angiogenesis for blood vessel neogenesis in older adult subjects with ischemic heart disease.
- 2. New approaches in clinical-experimental research in diabetes and metabolism and clinical nutrition applied to chronic diseases:
 - Type 1 diabetes, new technology, biomarkers, and psychosociological approach
 - Clinical nutrition and dietetics applied to artificial nutrition
 - Surgical morbid obesity: clinical experimental models
 - Hypogonadism and glomerulopathy associated with obesity.
 - Clinical nutrition in chronic diseases (cystic fibrosis and bronchiectasis, cancer, and neurological diseases)
 - New methods for the assessment of nutritional status and their prognostic value
- 3. Epidemiology and risk factors for diabetes and related metabolic diseases
 - Epidemiology of diabetes mellitus, obesity, and related metabolic diseases in Spain and Andalusia (prevalence and incidence)

- Study of new prognostic ecological markers (environmental pollution) for hydrocarbon metabolism abnormalities.
- Study of biomarkers predictive of diabetes and metabolic diseases (e.g. mRNA, genetic, epigenetic, and biochemical biomarkers).
- Epidemiology of thyroid diseases in Spain and iodine deficiency disorders.

BE-03. HEMATOLOGY AND HEMOTHERAPY
LR Francisco José López Jaime

Priority line of research:

- Study of genetic/genomic profiles with an influence on the diagnosis, treatment, and survival of adult and pediatric patients with hematologic neoplasms. Individualized treatment and quality of life.

Other lines:

1. Transplantation of hematopoietic stem cells in adult and pediatric patients:
 - Home-based hematopoietic stem cell transplantation and quality of life.
 - Study of variables involved in graft-versus-host disease.
 - Study of chimerism in allogeneic hematopoietic stem cell transplantation using new technologies (real-time PCR and digital PCR), prognostic implications, and prediction of relapse.
2. CAR-T (Chimeric Antigen Receptor-T) cell therapy: efficacy and quality of life studies.
3. Study of rare hematologic-based diseases: diagnosis and individualized treatment.
4. Hemostasis and Thrombosis: Clinical and laboratory approach to new therapies for patients with hemophilia. Digital tools for the management and analysis of information in hemophilia. Immune thrombocytopenia. Thrombophilic states of genetic and acquired origin. Thrombosis in oncohematology.

C-07. BASIC AND APPLIED ASPECTS OF NEUROPSYCHIATRIC AND NEURODEGENERATIVE DISEASES

LR José Ángel Narváez Bueno

Priority line of research:

Basic biomedical aspects of neurotransmission and regeneration in the central nervous system to aspects applied to clinical and therapeutic approaches to neuropsychiatric and neurodegenerative diseases from different approaches but which converge on the study of basic mechanisms that will allow for the development of new diagnostic and therapeutic tools for the treatment of these diseases.

Other lines:

1. Study the role of neuropeptides in key areas of the central nervous system (CNS) for the mediation of behavioral functions associated with anxiety, depression, and fear.
2. Analyze the functional interaction of the opioid and dopaminergic systems during opioid dependence in areas related to the learning and consolidation of addictive behavioral habits.
3. Delve deeper into the molecular and cellular bases involved (such as oxidative stress) in the genesis of neurodegenerative processes such as aging and Parkinson's disease and study the neuroprotective effects of IGF-II.
4. Early diagnosis, monitoring, and intervention in neurodegenerative and neuropsychiatric diseases and through autonomic and cognitive assessment techniques. Basic and applied aspects.

C-13. CHRONICITY, DEPENDENCY, CARE, AND HEALTH SERVICES
LR José Miguel Morales Asencio

Priority line of research: Multidisciplinary models of care and interventions in individuals with chronic diseases and multimorbidity as well as in situations of dependency.

Other lines:

- 1. Health inequalities in the caregivers of individuals with multimorbidity and dependence.
- 2. Clinical safety in individuals with chronic disease, multimorbidity, and dependence.
- 3. Improving the effectiveness of health care for individuals with chronic diseases and their caregivers (methods and instruments for evidence-based healthcare, design and implementation of clinical practice guidelines).

The spectrum ranges from interventions and models of care for people with chronic pain or type II diabetes mellitus, prevention of adverse events in this population, development and analysis of services for individuals with multimorbidity (case management, transitional care, etc.), or the health impact of the role of family caregiver in the medium-and long-term, among other examples.

LR Javier González Jiménez. Co-LR Francisco Ángel Moreno Dueñas

Priority line of research: Use of robotic technology to improve the independence of older adults in their homes

Other lines of research:

- 1. Development and research on robotic telepresence systems that allow for extending independent living and social interaction among older adults. This system is designed so that a family member, caregiver, or healthcare professional can virtually visit the user’s home, experiencing an interaction very similar to a conventional in-person visit.
- 2. Development of automatic, safe navigation systems in small settings as well as systems for friendly interaction among older adults with a certain degree of cognitive frailty who live alone in their homes. This interaction seeks to alleviate the feeling of loneliness by contributing to users’ independence and well-being.
- 3. Development and research on sensor networks and algorithms for sensing activity in the environment as well as physiological parameters of individuals (patients who are chronic, at risk, in rehabilitation, etc.) for the purpose of monitoring and control by public health professionals (doctors, nurses, social workers, etc.).

FUNDING

The following graph shows changes in the revenue obtained by IBIMA Plataforma BIONAND over the last 5 years. This revenue is the sum of competitive and non-competitive grants (donations, agreements, and service provision agreements) obtained by the Institute in addition to the invoicing generated by the clinical studies performed.

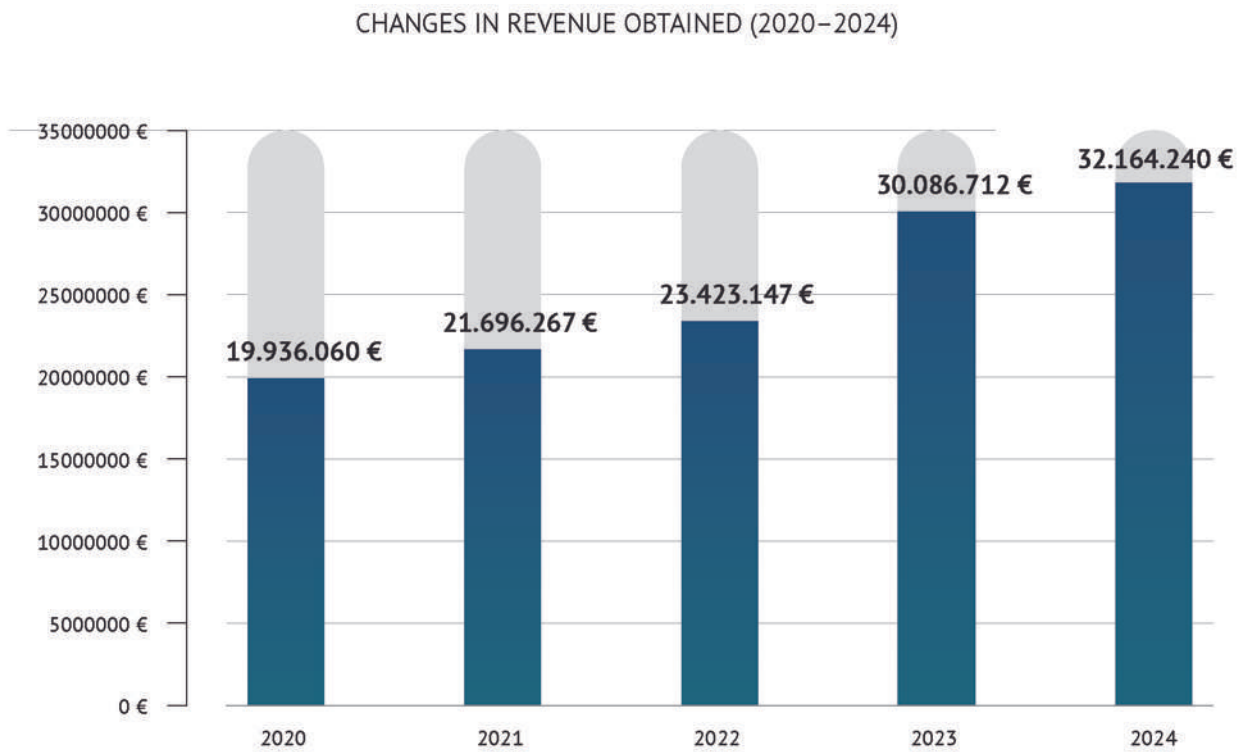

Figure 53: Changes in revenue obtained (2020–2024)

As seen in the figure, the revenue obtained by or awarded to IBIMA has increased or remained steady over the years. This indicates that the institute is an established project with a clear vocation for growth. It generates synergies that translate into sustained growth.

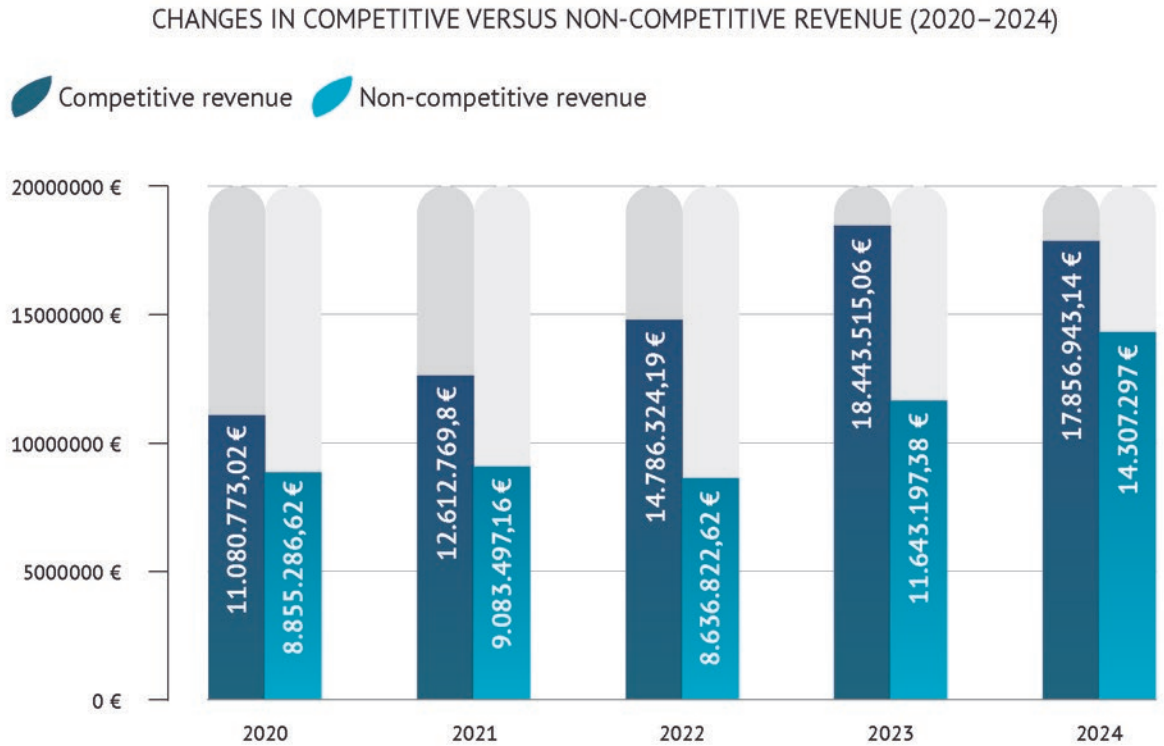

Figure 54: Changes in competitive versus non-competitive revenue (2020–2024)

Comparing competitive and non-competitive revenue obtained, it can be observed that both types of revenue have increased or remained steady, with similar figures for both revenue types. On analyzing expenditures, the proportion is the same, though non-competitive revenue was slightly lower, as shown in the following table for the 2024 fiscal year:

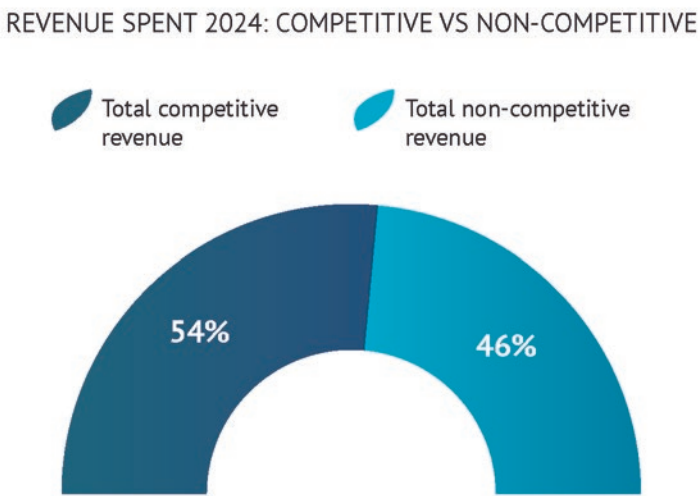

Figure 55: Revenue spent 2024: Competitive vs non-competitive

In turn, the following shows revenue spent broken down by its nature:

Master’s Degrees at the University of Málaga in the 2023–2024 academic year

Health Sciences

- Master’s degree in biomedical research on diabetes and obesity.
- Master’s degree in human microbiota: research, clinical practice, and health.
- Master’s degree in biomedical research: dialog between clinical practice and molecules.
- Interdisciplinary master’s degree in palliative care.
- Master’s degree in morphofunctional assessment of disease-related malnutrition.
- Master’s degree in physical therapy in pelvic floor dysfunction.
- Master’s degree in adult and pediatric critical care nursing.
- Master’s degree in emotional intelligence and positive psychology.

Other University Expert Certificates in which IBIMA Plataforma BIONAND researchers have participated are the following:

- Interdisciplinary University Expert Certificate in Palliative Care.
- University Expert Certificate in Ethics for Healthcare Professionals.
- University Expert Certificate in clinical research and clinical trials monitoring.
- University Expert Certificate in techniques and procedures in medical emergencies.
- University Expert Certificate in therapeutic exercise and functional rehabilitation in physical therapy.
- University Expert Certificate in child clinical neuropsychology.

IBIMA Plataforma BIONAND Educational Program

Educational activities organized by IBIMA in 2024:

- Course on science communication aimed at key non-scientific actors: “Researchers’ skills on communicating science to the public.”
- Do the new obesity drugs really work?
- Pint Of Science 2024.
- Leadership, Biomedical Research, and Clinical Context: Difficulties and Opportunities.
- How to start a biomedical research and teaching career at the university.
- From a research career to the pharmaceutical industry.
- Guidance and tips for preparing the data management plan for FIS projects.
- III Conference on Primary Care.
- II Conference on Nursing.
- IBIMA-RARE Conference.
- I HRUM R&D&I Conference.
- I Clinical Research Academy, Antequera.
- Farmaindustria Conference.
- XXIII Conferences on Advances in Hepatology 2024.
- Open-house for different educational centers
- Women in neuroscience. Sowing the seeds of the future.
- European Researchers’ Night 2024.
- International conferences of professionals in the field of allergy research: Role of B cells in immune tolerance to allergens, speaker: Mubeccel Akdis, and Epithelial barrier theory and development of allergic and autoimmune diseases, speaker: Ali Cezmi Akdis
- Talk: Large-scale implementation of polygenic risk scores for preventive health care.
- Single Cell Seminar.
- Seminar: Single Cell Seminars: SeekGene Technology.
- Seminario Stemcell ‘Unraveling the Potential of hPSC and hPSC-derived Models’.
- Genome & cellular regulation.

- 26th Edition of the online course on Good Clinical Practice Standards.
- XVII Edition of the online course on Good Laboratory Practices.
- Ethical and regulatory methodological aspects of clinical trials.
- Methodological, ethical, and regulatory aspects of research projects.
- Basic use of R.
- Introduction to cell-sorter organized by the Cultures ECAI.
- Genomic analysis interpretation course.
- Basic and advanced aspects of proteomics. Proteomics ECAI.
- Transcriptome analysis interpretation course.
- Course on interpretation of proteomic/metabolomic analysis.
- Basic statistics in biomedical research and research methodology.
- Advanced statistics in biomedical research and methodology.
- Clinical application of epigenomics. Epigenomic Epidemiology-Advanced Epigenomics: techniques and their application.
- Genomics ECAI. General information.
- Training session: Applications of the Nanoimaging, Flow Cytometry, and Histology ECAIs.
- IBIMA clinical research support conference.
- Data protection meeting (GDPR).
- Conference on Innovation and Technology Transfer.
- Innohealth-Innovation Conference.
- Introductory conference on the Chemsex phenomenon.
- II Conference on Endometriosis.
- Talk on the new Ethics Committee information system.
- Informational meetings about the MARIE SKLODOWSKA-CURIE – POSTDOCTORAL PROGRAM.
- First aid course.
- Immunological basis of immune-mediated gastrointestinal diseases and their therapeutic management.
- ‘MSCA-PF Candidate Search through the MSCA-NET Platform’ workshop.
- University Expert Certificate in Clinical Research and Clinical Trials Monitoring from the University of Málaga.
- Creation of a Research Protocol Workshop Course.
- World Health Day: “Health First.”

COMMUNICATIONS

In 2024, IBIMA Plataforma BIONAND has strengthened its presence on social networks through an organic and professional strategy on Facebook, Instagram, LinkedIn, and X.

Sixty press releases were published in coordination with the Foundation for Progress and Health, the University of Málaga, and the Regional University Hospital of Málaga and Virgen de la Victoria University Hospital. A certain degree of impact on the media has been achieved, with more than 1,000 media mentions. The reach, interaction, and performance of the social media profiles, as well as the main repercussions in the written and digital press, are listed below.

IMPACT ON SOCIAL NETWORKS:

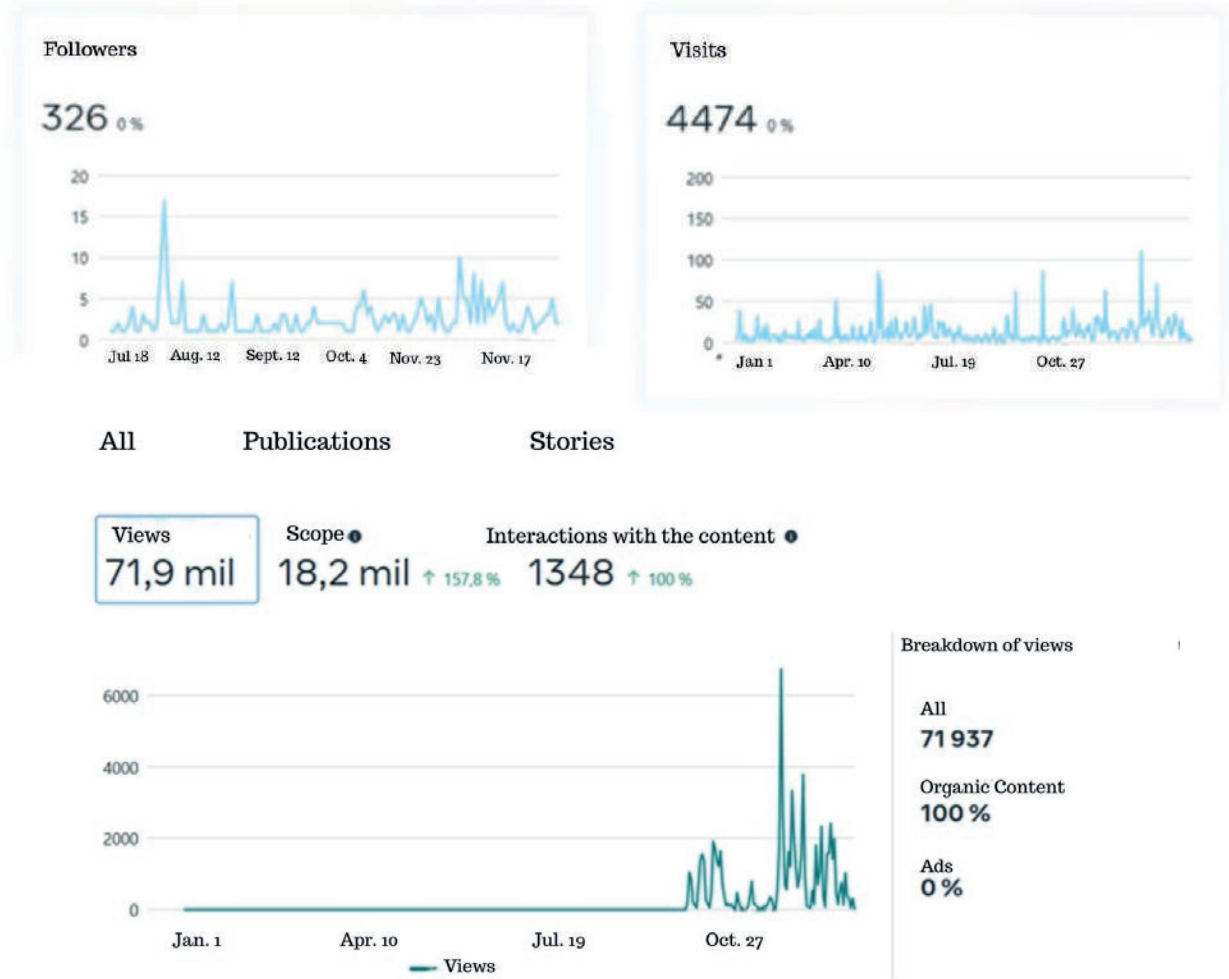

FACEBOOK:

- Total followers: 1,989

COMMON RESEARCH SUPPORT SERVICES (ECAI)

The IBIMA Plataforma BIONAND spaces dedicated to research total 10,307 m². They are distributed between the Regional University Hospitals (General H., Maternal H., and Civil H.) and the Virgen de la Victoria University Hospital (including a space in the Valle del Guadalhorce Hospital), the Málaga-Guadalhorce Primary Care Healthcare District, and the University of Málaga, by virtue of agreements signed for the use of spaces and/or shared use, as well as the Málaga TechPark building.

The following is a description of the Shared Research Support Services (ECAIs for their initials in Spanish) that support the various research groups and are necessary for carrying out the institute's activity.

Shared Research Support Services (ECAI, for its initials in Spanish)

- **CLINICAL RESEARCH AND CLINICAL STUDIES** (7th floor of the Regional University Hospital of Málaga (HURM), Early Phase Units at the HUVV and HRUM).
- **METHODOLOGICAL AND STATISTICAL ADVISORY SERVICE**
- **GENOMICS** (node in the Malaga TechPark building, node in the IBIMA laboratory at the HUVV, and node on the 1st floor of the UMA Bioinnovation building at Málaga TechPark)
- **PROTEOMICS** (SCAI building of the UMA on the Teatinos Campus)
- **CELL THERAPY AND GMP ROOMS** (7th floor HURM)
- **BIOBANK** (basement of pavilions 5 and 6 of the Civil H.)
- **ANIMAL EXPERIMENTATION** (Málaga TechPark building and Animal Experimentation Center at the UMA, Teatinos Campus).
- **BIOINFORMATICS** (Malaga TechPark and UMA building, Bioinnovation building in the Málaga TechPark).
- **CELL BIOLOGY (CYTOMETRY AND CULTURES)** (Málaga TechPark building and laboratories 1, 2, and 3 in the hospitals)
- **NANOIMAGING** (Málaga TechPark building).
- **HISTOLOGY** (Málaga TechPark building).
- **CHEMISTRY** (Málaga TechPark building).

Common Research Spaces (Laboratories):

- Laboratory 1. Location: Civil Hospital (HRUM), basements of pavilions 2, 5, and 6.
- Laboratory 2. Location: Virgen de la Victoria University Hospital.
- Laboratory 3 or Regenerative Medicine Laboratory (LMR, for its initials in Spanish). Location: Basement of the HRUM Administration Wing.
- Phase I Clinical Trials Unit: Virgen de la Victoria University Hospital and the Regional University Hospital of Málaga.
- Phase II-III Clinical Trials Unit: Virgen de la Victoria University Hospital and the Regional University Hospital of Málaga.
- Laboratories of the Málaga TechPark building.

Common Research Spaces in the School of Medicine (Pharmacology Laboratory and Legal and Forensic Medicine Department Laboratory), School of Health Sciences (Experimental and Human Movement Laboratory), School of Sciences (BIO-267 Laboratory and the Cellular Biology, Animal and Plant Physiology, and Department of Organic Chemistry laboratories), School of Psychology (Basic Physiology and Psychobiology and Social Sciences Methodology Laboratory), and the Industrial Engineering Higher Technical School (3D printing for research support (LIPSI)), all located on the Teatinos Campus of the University of Málaga.

PRIMARY CARE research space: Two offices on the 2nd floor of the Civil Hospital.

CLINICAL STUDIES

We conduct research to contribute to improving citizens' health. Our commitment is shared with industry leaders, who rely on our institute to conduct their clinical trials thanks to the robustness of our healthcare system, the high level of training of our professionals, and our state-of-the-art infrastructure for the optimal execution of our clinical research activity.

Independent Clinical Research and Clinical Trials Unit (UICEC, for its initials in Spanish)

IBIMA Plataforma BIONAND's Clinical Research and Clinical Trials Unit is a multidisciplinary support structure for the research groups at the research institute—the Regional and Virgen de la Victoria University Hospitals of Málaga and primary care—to conduct clinical research studies.

The IBIMA UICEC forms part of the Spanish Clinical Research Network (SCReN) and partially funded by the Carlos III Institute of Health (PT23/00137). On the European level, SCReN forms part of ECRIN, the European Clinical Research Infrastructure Network. SCReN is a national hub and supports and manages international multicenter clinical trials.

Services:

- Methodological and regulatory scientific advising.
- Management and administrative processing.
- Coordination and scientific management of clinical research.
- Scientific management of clinical research.
- Performing studies: Pre-start-up of clinical trials, conduct, finalization, and close-out.
- Monitoring.
- Pharmacovigilance.

Coordinator: Ms. María Isabel Lucena González, Scientific Director of UICEC.

Personnel in 2024: 9 Professionals

Clinical Studies Unit of the Regional University Hospital of Málaga

The aim of the Clinical Studies Unit of the Regional University Hospital of Málaga is to foster and promote observational studies and national and international clinical trials at the center in order to generate knowledge and improve patient health.

Services:

- Technical and administrative support to promote and dynamize the management and conduct of clinical trials and commercial observational studies.
- Promote the research activity of the clinical units of both consolidated and emerging units.
- Increase the number of commercial, national, and international clinical studies.
- Resolution of incidents that hinder the conduct of clinical studies.
- Optimize contract management and metrics/timing.

Coordinator: Mr. Francisco Carabantes Ocón

Phase I Clinical Trials Unit

The Phase I Clinical Research Unit of the Regional University Hospital of Málaga is located on the first floor of Pavilion 1 of the Civil Hospital. It has a space measuring 340 m², distributed in a user reception area, a consultation room for extractions, a nursing station, four consultation rooms, a waiting room, and a day hospital.

Coordinator: Mr. Francisco Carabantes Ocón

Clinical Studies Unit of the Virgen de la Victoria University Hospital in Málaga

The aim of the Clinical Studies Unit of the Virgen de la Victoria University Hospital Málaga is to foster and promote national and international observational studies and clinical trials at the center in order to generate knowledge and improve patient health.

Services:

Technical and administrative support to promote and dynamize the management and conduct of clinical trials and commercial observational studies.

- Promote the research activity of the clinical units of both consolidated and emerging units.
- Increase the number of commercial, national, and international clinical studies.
- Resolution of incidents that hinder the conduct of clinical studies.
- Optimize contract management and metrics/timing.
- Manage the infrastructure of the Phase II/III clinical research assistance area.

Phase II/III clinical research care area

Area that measures more than 600 square meters for phase II and III clinical research. It has a total of ten consultation rooms, a samples collection room, a day hospital, and sample processing rooms.

Coordinator: Mr. Manuel F. Jiménez Navarro

Phase I Clinical Trials Unit

The Phase I Clinical Research Unit of the Virgen de la Victoria University Hospital can be directly accessed from outside the hospital. It has a user reception area, a consultation room for samples collection, a nursing station, two consultation rooms, a day hospital, and two double rooms.

As of July 2024, the unit complies with the definitive standards of the Early Phase Clinical Trials Unit Standards Manual, with advanced quality certification by the Andalusian Healthcare Quality Agency.

Coordinator: Mr. Javier García Corbacho.

Main results of the ECAI in 2024:

No. of active independent clinical trials	No. of new independent clinical trials	No. of new early phase (I-II) clinical trials	Revenue from clinical trials (€)
350	38	77	€12,491,242.40

Location: This platform is located on the first floor (Phase I Clinical Trials Unit) and on the 2nd floor (Phase II/III Clinical Research Care Area) of the Virgen de la Victoria University Hospital, the first floor of pavilion 1 of the Civil Hospital, and on the 7th floor of Pavilion A of the Regional University Hospital of Málaga.

METHODOLOGICAL AND STATISTICAL ADVISORY SERVICE

The aim of this research advisory unit for research groups is focused on fulfilling the full potential to generate data that are crucial to detect, solve, and prevent problems related to patients’ health. It offers specialized biomathematical support that adds rigor and takes special care in design, implementation, and analysis. It provides scientific support that bridges the gap between clinical and translational research.

Services:

- **Methodological and epidemiological advising:** Methodological advising and/or review of research protocols, analysis of the grounds for rejecting projects, review of scientific articles.
- **Statistical advising:** sampling and sample size calculation, descriptive analysis of data, inferential analysis (bivariate and multivariate), support in the use of free software for statistical data analysis (R-project), and review of scientific articles.
- **Advising to research groups:** gathering knowledge about the work conducted in the research groups to support starting lines of research or clinical innovation and identify and promote possible inter-unit, inter-center, and international collaborations. Support for groups’ research personnel in the exploitation of their data as well as in the dissemination of their experimental results in national and international forums. Advising for research groups on their research interests in order to define objectives and outline appropriate strategies to achieve them.
- **Educational activities:** education on research methodology, the use of free software for statistical data analysis, advanced statistics, preparation of a scientific manuscript for publication in peer-reviewed scientific journals, critical reading of scientific literature, and specific educational courses according to researchers’ needs.

Coordinator: Rita Pérez González

GENOMICS

Platform that facilitates sequencing services (DNA using the Sanger method, Ultrasequencing, and Pyrosequencing) and SNP genotyping. It also creates genetic reports of monogenic diabetes. It is accredited in good practices according to the ISO 1704 standard coordinated by the European Molecular Genetics Quality Network (EMQN), which it participates in annually.

The Genomics ECAI provides technical and methodological support for research projects for the use of data and statistics. It provides services in two ways:

- Internal service through temporary access for IBIMA Plataforma BIONAND researchers who need its infrastructure to conduct research projects funded by different programs.
- External services to public and private, national and international institutions.
- It is organized into two sections:
- Genotyping, sequencing, pyrosequencing, and miRNA expression section, which encompasses the largest percentage of the work requested.
- Biomarkers section, in which diagnostic, prognostic, progress, or treatment response biomarkers are identified. This section provides support to numerous projects. The ECAI is part of EATRIS (European Advanced Translational Research Infrastructure in Medicine).

This ECAI also includes the CIBER-IBIMA Metagenomics Platform, which provides microbiota analysis services to national CIBER researchers as well as to internal and external researchers who request it.

The following infrastructure, distributed in different lines, is available to provide the portfolio of services:

Nucleic acid extraction area
Fume extraction hood
Maxwell automated DNA extraction
QIAcube automated DNA extraction
NanoDrop 2000 C nanospectrophotometer
Qubit 4 Fluorometer
Biotek Synergy MX Fluorimeter
Nucleic acid amplification area:
Thermocyclers:
QIAamplifier 96, Qiagen
MyCycler gradient, Bio-Rad
Mastercycler gradient, Eppendorf
Veriti 96-Well Thermal Cyclers, Applied Biosystems
Real-time thermal cyclers:
CFX96 Real Time System, Bio-Rad
The LightCycler® 480 Instrument II, Roche Diagnostics
7500 Fast Real-Time PCR System, Thermo Fisher Scientific
Mx3005P qPCR real-time PCR, Agilent Stratagene
QuantStudio 6 Flex Real-Time PCR System
QuantStudio 12 Real-Time PCR System
Nucleic acid amplification area:
Pyrosequencing:
PyroMark Q96 ID, Qiagen
PyroMark Q48 Autoprep, Qiagen
Sanger sequencing:
Avant Genetic Analyzer 3130XL, Applied Biosystems
Next Generation Sequencing (NGS):
Ion Chef System
Ion GeneStudio S5 System

Scientific Coordinator: Dr. Isabel Moreno Indias

Personnel in 2024: 2 Technicians

Location: This platform’s main headquarters is located at the IBIMA Plataforma BIONAND building in Malaga TechPark. It also has spaces in the basement of Pavilion 5 of the Civil Hospital (Regional University Hospital of Málaga) and in the laboratory on the 1st floor of the Virgen de la Victoria University Hospital.

PROTEOMICS

The main objective of this platform is to provide scientific and technical support and advising in the identification and characterization of proteins and other biomolecules, mainly through mass spectrometry techniques.

Services:

- Sample preparation:
 - Protein extraction.
 - Desalting and concentration of samples.
 - Peptide purification through RP-HPLC.
 - Manual and automated enzymatic digestion of proteins in gel and in solution.
 - Preparation of histological sections for MALDI-Imaging.
 - Sample preparation for MALDI-Imaging of colonies.
- Chromatography:
 - HPLC: High Performance Liquid Chromatography.
 - FPLC: Fast Protein Liquid Chromatography.
 - TLC: Thin-layer Chromatography.
- Mass spectrometry:
 - Determination of protein molecular masses.
 - Identification of proteins in purified samples and complex mixtures.
 - Relative protein quantification by: LFQ, TMT, SILAC.
 - Study of post-translational modifications.
 - Analysis of protein profiles.
 - Study of the spatial distribution and relative abundance of analytes in intact samples of animal or plant tissues through MALDI-Imaging.
 - Study of bacterial metabolite profiles in microbial colonies and/or biofilms through MALDI-Imaging.
- Immunoassays: simultaneous detection and quantification of different secreted proteins (cytokines, chemokines, growth factors, etc.) by means of immunoassays based on Luminex technology.

Main results in 2024:

- A total of 44 requests for analysis corresponding to different research projects were attended to.
- Ten scientific publications were contributed to.
- Seven contributions to scientific conferences were made.
- The completion of 1 Bachelor’s Degree Final Project (TFG), 6 Master’s Degree Theses (TFM), and 1 Doctoral Thesis were collaborated on.
- Six training and teaching support activities were conducted.
- Six scientific dissemination actions were carried out.
- Seventeen training actions were completed by the three department technicians.
- Two new techniques or services were added to the catalog of services.

CELL CULTURE AND CYTOMETRY

CELL CULTURE

The Cell Culture Unit provides the institute's research groups and other public or private institutions the possibility of culturing and maintaining cells (mainly murine and human), including both primary cultures and established cell lines, offering advising from specialized personnel and the conduct of assays with guaranteed flexibility and adaptation to specific requirements.

Services

GENERAL:

- Maintenance and disinfection of biosafety hoods.
- Maintenance and disinfection of incubators.
- Regular change of water in CO2 incubators.
- Maintenance and disinfection of thermostatic baths.
- Periodic analysis of mycoplasma contamination in incubators.
- Solid waste disposal and treatment and disposal of liquid waste.
- Equipment and facilities for the use of viral vectors in cell culture.
- Daily control of temperature and CO2 in incubators.
- Annual certification of cabins and incubators.

SPECIFIC:

- Advice on the acquisition and maintenance of cell lines.
- Cryopreservation of samples.
- Analysis of mycoplasma contamination.

Scientific Coordinator: Dr. Elena González Muñoz

Personnel in 2024: 1 Technician in charge , shared with the Animal Housing Unit.

Main results 2024:

- Service to 15 research groups under the terms of the services offered.
- Education and training on the correct use of the unit for the personnel of 17 research groups (39 users).
- User management using a calendar in Clustermarket as well as billing of services rendered to internal and external entities.
- Maintenance and verification services have been performed for the cabins in use.
- The technician has completed a Good Laboratory Practices course (IAVANTE FPS)

DISSEMINATION:

1. 9 Visits organized for high school and vocational training students.

CYTOMETRY

The main objective of this unit is to provide support for the conduct of research studies carried out by the different groups that form part of the Institute or other research centers through scientific advising, sample analysis, and presentation of results in the field of flow cytometry.

The unit's primary mission is to provide efficient, quality service in order to promote and carry out research.

The catalog of services includes, among others:

- Analysis of cell populations via fluorescence:
 - Identification of cell populations through intracellular or extracellular antigen labeling.
 - Cell viability, cell cycle, and apoptosis studies using vital dyes (Annexin-V/Propidium Iodide, TUNEL, mitochondrial membrane potential determination, sub-G0 peak detection, etc.).
 - Studies of oxidative stress using fluorescent probes.
 - Determination of cell proliferative index using labeled nucleoside analogs (BrdU).
 - Fluorescent protein-guided gene expression studies (GFP, YFP...).
 - Quantification of cytokines and other soluble proteins.
 - Intracellular Ca²⁺ mobilization studies.
- Spectral analysis: Provides the possibility to analyze up to 40 colors
- Cell sorting from single cells collected in tubes or plates

Scientific Coordinator: Dr. Elena González Muñoz

Personnel in 2024: 1 Technician specialized in cytometry and cell separation.

Main results 2024:

- Incorporation of new techniques and protocols according to user demand. Several cytometry panels, both spectral and conventional, have been designed and optimized to meet the requirements of the researchers' projects.
- The technique of cell separation via cytometry has been performed in the separating spectral cytometer at the request of users.
- Fourteen new users have requested services from the cytometry unit, including both independent users of the analyzer and users of the spectral cytometry and cell separation services offered by the specialist technician. Currently, the unit routinely provides services to 8 different IBIMA and UMA research units.
- Four users were trained to use the cytometer analyzer correctly and autonomously.
- Advising has been provided on experiment design and results analysis to different research groups that have requested it, both from IBIMA and from the UMA and companies.
- The software license acquired has been used and the users who have requested it have been advised on its use for analyzing cytometry data obtained from the unit's equipment.
- The contracting of maintenance services for the two cytometers in use has been negotiated and the conditions of contracting have been established. The corresponding maintenance visits have occurred.
- A course on Good Laboratory Practices (IAVANTE FPS) has been carried out

DISSEMINATION:

1. Introductory talk on the Cytometry Unit for IBIMA-BIONAND.
2. Several visits organized for high school and vocational training students, undergraduate biology students (University of Málaga), and representatives of other entities, as well as occasional visits by researchers from other institutions throughout the year.

Location: This platform is located in the IBIMA Plataforma BIONAND building in Málaga TechPark.

CELL THERAPY AND GMP ROOMS

The institute's Cell Production Unit (CPU) has **three rooms authorized for the aseptic manufacture of advanced therapy drugs according to GMP** (Good Manufacturing Practices) **standards**. The facilities meet the quality and safety requirements for the aseptic manufacture of medicines according to the Spanish Agency of Medicines and Medical Devices (AEMPS) guidelines since 2012. It is part of the Andalusian Network for the Design and Translation of Advanced Therapies (RADyTTA), whose objective is to promote the development and application in clinical practice of the results obtained from research in the fields of cell, tissue, gene, and nanomedicine therapy.

In addition, through the RADyTTA, the unit belongs to the RICORS Network of Advanced Therapies (TERAV) and the Networked State Consortium for Advanced Therapies (CERTERA), which aims to establish the scientific collaborations necessary for the clinical development of safe and effective advanced academic therapies, and the coordination of networked technological structures that facilitate the translation of these therapies to the National Health System in order to facilitate their clinical translation and patients' access to them.

This unit is authorized by the Spanish Agency of Medicines and Medical Devices for the **manufacture of cell therapy drugs based on expanded adult mesenchymal adipose tissue-derived stem cells (ADSCs) for autologous or allogeneic use** as well as the conduct of the corresponding quality controls according to the European Pharmacopoeia (Ph. Eur) for use in clinical trials in diseases that do not have or do not adequately respond to conventional treatments, such as amyotrophic lateral sclerosis (ALS), structural fecal incontinence, acute cerebral infarction or stroke, and severe SARS-CoV-2 pneumonia.

In addition, it manufactures drugs for compassionate use procedures with prior authorization from the AEMPS for the following diseases:

- Graft-versus-host disease (GVHD)
- Neurological diseases: ALS, multiple sclerosis
- Fecal incontinence
- Severe SARS-CoV-2 pneumonia.
- Pediatric craniosynostosis

It pioneered the First External Quality Program in Advanced Therapies (www.eqa-atmp.com), which aims to standardize and verify the quality of the tests and techniques used in the manufacture of advanced therapy drugs.

The ECAI is currently collaborating with the University of Málaga on the creation of a 3D bioprinting platform for the preclinical evaluation of customized implants manufactured by bioprinting for the surgical correction of critical cranio-maxillofacial defects in pediatric patients.

Services:

- Isolation of adult mesenchymal stem cells derived from adipose tissue, *in vitro* expansion to obtain the dose assigned according to protocol, and subsequent packaging.
- Quality controls for cell therapy trials.
- Environmental and surface microbiological control of facilities with ISO classification: air volumetrics, settle plates; surfaces using contact plates.
- Grading of thermal equipment: refrigerators, freezers, stoves, etc.
- Microbiological control testing of cellular products (Ph. Eur. 2.6.27), Mycoplasma (Ph. Eur. 2.6.7), endotoxins (Ph. Eur. 2.6.14), characterization of cellular products (Ph. Eur. 2.7.24), cell count and viability (Ph. Eur. 2.7.29), promotion of cell growth in culture and cell population doublings, genetic stability of ATMPs, cell recovery rate after thawing.
- Potency assay by estimating the immunosuppressive capacity of mesenchymal cells.
- Methodological, scientific, and technical advising on cell therapy clinical trials.
- Management, evaluation, and advising on trial documentation.
- Introductory education on cell therapy.
- External Quality Assurance Program in Advanced Therapies.
-

Coordinator: Dr. Antonio Rodríguez Acosta

Personnel in 2024: 3 Technicians

Main results 2024:

- In 2023, 30 batches of hAD-MSCs-based drugs were manufactured for compassionate use for patients with GVHD (allogeneic treatment).
- Quality control tests were performed the Grenoble Tissue Center (France) and for the Regional Transfusion Center of Málaga.
- Six batches of drugs were manufactured for a multicenter, randomized, double-blind, Phase IIb clinical trial to evaluate the safety and efficacy of intralesional administration of two doses of expanded allogenic adipose tissue-derived stem cells (ADSCs) conditioned in hyaluronic acid hydrogel as a treatment for patients with fecal incontinence.
- Since 2012, it has been actively collaborating with the RADyTTA, the Graduate School, and the University of Granada to offer a Master’s Degree in Manufacturing of Advanced Therapy Medicinal Products.
- Collaboration with the International University of Andalusia in the teaching of the Master’s Degree in Advanced Biotechnology.
- Personnel linked to the Unit participate as teachers and workplace tutors in the Cell Culture Specialization Course (Litoral High School).
- In 2024, teaching was done in the Expert Diploma in Clinical Research and Clinical Trials Monitoring (IBIMA/CIBER and SCReN Platform).
- It has become part of the EATRIS European platform and the ISCIII’s 3D Printing and Bioprinting HUB platform.
- It has joined the Networked State Consortium for Advanced Therapies (CERTERA).
- Participation in “A multicenter clinical trial with mesenchymal stromal cells in adult and pediatric patients with steroid-refractory acute GVHD to validate an immunomodulatory potency assay associated with treatment efficacy ICI23/00085.” Coordinating LR Rafael Duarte Palomino, Puerta del Hierro Hospital Foundation

- Dissemination activities conducted in 2024:
 - UMA divulga 2024 Conference.
 - ISCT Europe 2024 Conference regional meeting (Gothenburg, Sweden). 5 posters and 1 oral presentation:
 - Evaluation of virally inactivated human platelet lysates as a supplement for culture media in manufacturing of cell-based medicinal products (poster + speech).
 - Compassionate use of a cell therapy in patients with GVHD. An efficient model for patient access.
 - Evaluation of animal-free commercial media for cryopreservation of mesenchymal stem cells.
 - Standardization of the cryopreservation process used for allogeneic Mesenchymal Stem Cells-based products for clinical use.
 - A practical risk-based approach for the validation of a temperature monitoring system according to GMP Annex 11.
 - 27th Congress of the European Association for Cranio Maxillo Facial surgery. 1 poster:
 - Customized bioprinted implants for the surgical correction of critical-sized cranio-maxillofacial defects in pediatric patients.
 - Terav Network Annual Meeting. 1 collaboration poster:
 - The Cell Production Platform of the Advanced Therapies Network.

Location: This platform is located in the Cleanroom, 7th floor of Pavilion A of the Regional University Hospital of Málaga.

BIOBANK

One of the institute’s research support structures is the Provincial Biobank of Málaga, which in turn belongs to the Andalusian Public Health System Biobank. It is a unique biobank structure in terms of its potential and capacity for obtaining, transforming, preserving, and distributing samples for research purposes. It comprises 26 nodes located in SSPA (Andalusian Public Health Service) health centers. The Provincial Biobank of Málaga comprises 3 nodes: the Regional University Hospital of Málaga, the Virgen de la Victoria University Hospital, and the Costa del Sol Hospital in Marbella. It also has the support of the regional hospitals and the Axarquía, Ronda, and Antequera Hospitals.

It is registered and authorized by the competent authorities with file number B.0001601 dated 09/16/2020 and owned by the *Regional Ministry of Health and Families of the Regional Government of Andalusia (the Biobank of the Costa del Sol University Hospital, it has its own record, B.0000414, ownership: Costa del Sol Public Company, 12/03/2012, pending update)*, in accordance with the provisions of Article 13. Creation and Organization of the Andalusian Public Healthcare System Network Biobank according to **Decree 1/2013**, of January 8, regulating the authorization of the creation and operation of biobanks for biomedical research purposes, creating the Andalusian Biobank Registry and the Andalusian Public Healthcare System Biobank. The Provincial Biobank of Málaga was started 15 years ago. Since its inception, it has worked to become what it is today: a platform of services for provincial researchers, most of whom belong to the Institute, that allows users to carry out their projects with the assurance that the biobank guarantees that the ethical, legal, and technical requirements for biological samples and their associated data are met.

Services:

- Provision of samples and data for research projects.
- Provision of samples and data for clinical trials in collaboration with the Clinical Trials Platform of Málaga.
- Processing of samples.
- New: Organoid unit
- Preservation of samples at different temperatures.
- Technical, scientific, ethical, and quality advising on the collection, storage, and management of human samples in biomedical research.
- Files for diagnostic confirmation.
- Real-time web-based remote equipment monitoring.

Work is being done to optimize tasks according to employee’s positions, standardize procedures, improve the management of clinical care samples with primary care, improve services for clinical studies, and unify strategic lines.

The manners in which the biobank provides these services are:

- Requests for sample provision: activation of circuits for sample collection, delivery of samples or data, and their custody.
- Requests for custody: use of facilities for sample conservation.
- Requests for processing: processing of samples for researchers.

Resources and infrastructure:

The biobank’s resources and infrastructure have increased significantly in the last 3 years, which shows that it is a consolidated unit with a clear vocation for expansion and growth, generating the synergies necessary for the ongoing development of the structure according to demand. In this sense, the institute continues to provide important support to this unit: it covers the costs of equipment maintenance and repair, commits to acquiring the necessary equipment for the structure, and provides its technicians with the necessary tools to advance in their professional careers.

At present, its facilities cover 346 m², of which 230 m² correspond to 4 cryopreservation rooms. The remainder is divided into 4 sample reception and registration areas and 3 processing laboratories. All of its locations have the necessary equipment for the transformation of biological sample and their conservation according to the standard operating procedures. The cryopreservation rooms have equipment for preserving samples at -196 °C (11), -80 °C (44), -20 °C, 4 °C (5), and room temperature (5). It features digital temperature monitoring, validation with an external probe, 24/7 alarm management, connection to a power generator, independent air conditioning and heating, CO2 and O2 detection, forced ventilation activation, etc.

In addition, there are internal and external maintenance plans for all available equipment as well as a comprehensive emergency plan. The sample processing laboratories are also equipped with IIA biological safety laminar flow cabinets (2), microtome, tissue safe, refrigerated centrifuges (2), and other laboratory equipment.

Invoicing for services:

Invoicing for services provided during the 2024 financial year was done entirely through the Andalusian Public Foundation for Progress and Health and totaled €39,786. Málaga represents 41.6% of the total income of the SSPA biobank, a total for the Andalusian Biobank of €95,616.32.

Research projects led and collaborations:

1. Principal LR Biobank (Francisco Tinahones Madueño). National Platform for Biobanks, Biomodels, and 3D Printing, PT23/00049, ISCIII. Total amount: €287,680. Duration: 3 years

Internalization of the structure:

The Biobank, Organoids, 3D Printing, and Animal Biomodel Platform provides services to IBIMA researchers to conduct their research activity in international and national networks. The international networks that IBIMA participates in are:

- European Biobanking research infrastructure (**BBMRI-ERIC**) (<https://www.bbmri-eric.eu>): European research infrastructure for biobanks, which brings together the main actors in the field of biobanks to promote biomedical research. This network offers a variety of services. It comprises a total of 20 countries as full members and 5 countries as observers, with Spain being an observer member since November 2021. In Málaga, work is performed in full alignment with the national and European strategy, forming part of this network of networks. The structure stands out in the objective dedicated to quality, co-leading one of the working groups (“Development of the UNE Guide for the implementation of ISO20387 for Biobanks”).
- European Infrastructure for Translational Medicine (**EATRIS**) (<https://eatris.eu>): European infrastructure formed by more than 80 cutting-edge translational medicine research institutes. It has 4 platforms; IBIMA participates in 2 of them: the Advanced Therapies Platform and the Biomarkers Platform, providing cutting-edge technologies and synergies to advance the development of innovative therapies, vaccines, and diagnostics. The platform collaborates by offering collections of samples and associated clinical data to the scientific community and promoting direct international collaborations. A member of the team has been selected for a training program within EATRIS Plus that aims to forge ties and exchange knowledge, the foundation of all collaborative networking.

Among the training provided , the following are noteworthy:

- Workplace mentoring of a clinical analysis laboratory advanced vocational training student.
- Training of Litoral High School teachers for the dual degree “Specialization Course on Cell Cultures.”
- Participation as lecturer in **I Expert Diploma in Clinical Research and Clinical Trials Monitoring. 15.00 ECTS.** 2024-2025 school year. Participation in 1 commercial clinical trial.
- Participation in teaching for the **Master’s Degree in Biomedical Research on Diabetes and Obesity.** 60 ECTS credits. 2022-2023 school year. Participation in 1 commercial clinical trial.
- Online Clinical Session (Webinar): Biobank of the Andalusian Public Healthcare System in the clinical field. IAVANTE. 10/16/2024 III Ed.
- Online Course: “Management of samples for research” organized by the SSPA biobank, accredited by the Andalusian Healthcare Quality Agency (ACSA).

Conferences:

- Attendance of the Conference with the oral presentation: Europe Biobank Week 24 May 14-17 at The Hofburg in Vienna, Austria Strengthening Biobanks and Biorepositories: Collaborative approaches for a sustainable future:
 - “Clinical research development in healthcare centers with lack of resources: Biobanks as a key structure for their success.”
 - -“Organoid biobanks: Walking towards the future for a high-standing precision medicine.”
- ISBER 2024 Annual Meeting. Online. May 28-29, 2024:
 - “Exploring perspectives to facilitate communication between donors and biomedical research biobanks: A qualitative study.”
 - “Pediatric Collections in biobanks: Current challenges to bring advances in personalized medicine into pediatric medical care”

Dissemination activities:

As dissemination activities of the Biobank ECAI to the public, the following should be mentioned:

1. Participation in **the XII European Researchers’ Night 2024.**
2. **‘Cafés Conciencia’ as part of Science Week 2024,** to publicize the structure and the institute as well as to recruit donors for the Andalusian Registry of Donors for Research (REDMI).
3. Nursing students from the CESUR Institute were received during an **Open House** organized by the ECAI on the occasion of the International Day of Women and Girls in Science on February 9.
4. For tobacco-free day on May 29, a conference was organized at the company **OPPEPLUS** aimed at publicizing the general public in which the Biobank, the Registry of Donors for Research, the risks not leading a healthy life entails, and the IBIMA Plataforma Bionand Institute.

5. The biobank also participated in the **XI Conference of the Andalusian Sjögren’s Syndrome Association** with tabling for information dissemination and the recruitment of REDMI donors.

The structure and its services were also publicized to professionals in meetings organized with the hospital clinical management units and by participating as a speaker at:

- HUVV Cardiology UGC meeting on March 5:
- **“Ethical and legal aspects of the management and use of human biological samples in research projects.”**
- **I IBIMA Clinical Research Support Conference** held at the Hospital Materno Infantil on April 24.
- Finally, on December 19, the Biobank participated as one of the speakers at the conference organized by Novartis: **“Role of the coordinator/data entry in clinical research.”**

Other notable results:

- Adaptation of the Biobank Information System for clinical trials management.
- Its certification was renewed in 2024 according to the ISO 9001-2015 standard. The unit is certified under the UNE-EN ISO 9001:2015 Standard and participates in the creation of national guidelines for the UNE-EN ISO 20387 accreditation of biobanks, under the coordination of the national platform.
- Notable new services and innovations introduced include the creation and implementation of the **Donor Portal** , developed thanks to autonomous community funding received for this competitive public innovation project. This portal facilitates real-time citizen participation in biomedical research in an easy and accessible way. Donors can consult the results of the research projects they have participated in, manage their informed consent forms, and consult the availability of samples, among other options. The results of this project have been protected through an intellectual property registration. The project received the IBIMA Plataforma BIONAND 2022 Award for innovations transferred to clinical practice for the results obtained. The **Researcher’s Portal** was also created (Intellectual Property Registry FIMABIS-21008) in coordination with the SSPA biobank, which makes it possible to manage the entirety of an application online. In addition, the ECAI is working to better the website so as to improve user access to the platform.
- User satisfaction was greater than 8.5.

Location: This platform is located in Pavilion 5 in the basement of the Civil Hospital and in the Research Laboratory on the 1st floor of the Virgen de la Victoria University Hospital.

ANIMAL EXPERIMENTATION (UMA)

Maintenance, breeding, and housing of the animals used in different experimental procedures in ongoing research projects.

Services offered:

- Acquisition of animal models.
- Mouse/rat breeding and maintenance, transgenic models.
- Technical support service for performing experimental procedures.
- Advising on regulatory requirements for animal experimentation.

- Facilities:
- Breeding unit for animals with an SPF biological barrier,
- Three laboratories for processing samples and preparing reagents.
- Service for booking and using facilities for animal surgical procedures.
- Service for booking and using facilities for performing behavioral studies.
- Advising:
- Service or advising on experimental and behavioral procedures.
- Service or advising for breeding and reproduction.
- Advising on animal welfare and standardization of animal models.
- Training:
- Training on basic experimental techniques.
- Use of experimental, surgical, and behavioral devices.

Coordinator: Mr. Ricardo González Carrascosa

Personnel in 2024: 2 caretaker technicians, 3 breeding and procedures technicians, 4 assistants, 1 team leader, and 1 administrative assistant.

Location: This platform is located in the University of Málaga Animal Experimentation building.

ANIMAL EXPERIMENTATION (PTA BUILDING)

The animal housing service in the IBIMA Plataforma BIONAND building is a research support service whose objective is to provide housing for experimental animals, facilities, material, equipment, and advising necessary for conducting pre-clinical trials on the technologies and products developed at the center both for research groups and companies. The service has the necessary facilities and equipment to work with rats, mice, and zebrafish.

Rodent housing services:

The rodent housing service was authorized by the Autonomous Government of Andalusia's Regional Ministry of Agriculture and Fisheries in 2013. It has the capacity to house 170 rats and 2200 mice, with the possibility of expanding this capacity.

Services offered:

- Housing of laboratory rats and mice.
- Centralized supply of animal feed, shavings, sawdust, cages, racks, feeding bottles, etc.
- Provision of special diets for specific physiological or pathological studies.
- Type II special biological waste management service.
- Maintenance and care of animals in special conditions (temperature, light, humidity, sterile environment, etc.) during the conduct of the experiments that require them.
- Technical support service for performing experimental procedures (animal handling, routes of administration, sample collection, etc.).
- Rat and mouse breeding and maintenance service.

Zebrafish housing services:

Zebrafish housing in the center was authorized by the Regional Ministry of Agriculture and Fisheries in 2014. It has capacity to hold around 2000 zebrafish in 2 racks with 50 tanks each, with the possibility of expanding this capacity in the future.

- Services offered:
- Zebrafish housing.
- Advising on zebrafish handling, linecrossing, growth, and development
- Maintenance of zebrafish *wild-type* lines.

The animal housing facility has its own Animal Experimentation Ethics Committee that includes 5 members responsible for evaluating all animal experimentation projects to be carried out in the center. Approval must be requested from the Regional Ministry of Agriculture, Fisheries, Water, and Rural Development.

Scientific Manager: Mr. José María Pérez Pomares

Personnel in 2024: 2 Technicians

Location: This platform is located in the IBIMA Plataforma BIONAND building in Málaga TechPark.

BIOINFORMATICS

The Bioinformatics ECAI aims to serve as a research support unit, focusing especially on the methodological support of projects, the conduct of bioinformatics analyses, and the promotion of technological innovation.

Services:

- Database and clinical information collection system design.
- Review and advising on research projects. Improvements in methodology.
- Design of applications and specialized software for biomedical research.
- Management and advising on the REDCap data management platform that is integrated into the Andalusian Public Healthcare System and the University of Málaga.
- Omics analysis: proteomics, genomics, epigenomics, transcriptomics (coding and non-coding RNA, small RNA), microbiota.
- Mediation and advising for research groups for the creation of multidisciplinary projects. Search for potential collaborations.
- Automation of data processing and statistical analysis.
- Conduct of complex statistical analyses and use of machine learning and data mining techniques.
- Multiomics integration studies. (MixOmics)
- Design of data management plans and monitoring of FAIR principles.
- Prioritization of variants based on phenotypic information.
- Phenotypic quality assessment of patient and disease cohorts.
- Analysis for the prioritization of different small RNA species.
- Genome-Wide Association Study (**GWAs**) analysis.
- Copy number variation (**CNV**) analysis.

Novelties 2024:

5 new services have been added to the catalog:

- Application and integration of basic and advanced machine learning algorithms and statistical descriptors
- Application of new methodologies for differential expression analysis with interaction terms using DESeq2 and edgeR
- Cell deconvolution analysis using 450K methylation and EPIC data
- ATAC-seq chromatin accessibility studies
- Development of mobile applications in Dart.
 - The registration of a new technology patent has been processed.
 - Four specialized training courses were held
 - Two dissemination actions on REDcap were carried out.

Coordinator: Mr. Andrés González Jiménez

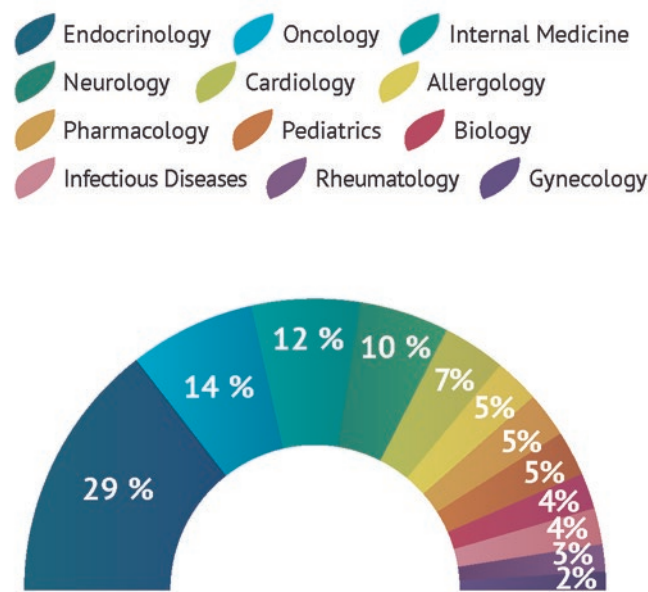

Personnel in 2024: 2 technicians, distributed as follows:

- 1 specialist technical coordinator
- 1 specialist bioinformatics technician.

Main results 2024:

Distribution of services provided by subject area

Location: This platform is located in the IBIMA Plataforma BIONAND building in Málaga TechPark.

This research support platform offers cytometry, cell culture, immunochemistry, and sample processing services as well as the sterilization of instruments and reagents.

Cytometry Service:

- Cellular immunophenotyping. Characterization of cell subpopulations, activation status, receptor expression, and cellular mediators
- Cell separator

Cell Culture Service:

- Preparation and aliquoting of specific antibiotics for culture media, inactivation, and storage of fetal bovine serum. Preparation of culture media as well as medium for freezing cells and pipette maintenance.
- Processing of different biological samples: cell separation by density gradient, obtaining serum and plasma.
- Obtaining and isolation of primary cultures and cell lines
- Lymphocyte isolation and labeling for cell proliferation studies
- Cell freezing

Immunochemistry Department:

- Immunoassays

It has full facilities for use by the different IBIMA Plataforma BIONAND research groups as well as for possible external users. There is a reservation system for equipment or services.

Coordinators: Ms. Cristobalina Mayorga, Mr. Manuel Macías, and Mr. Fernando Rodríguez de Fonseca.

Personnel in 2024: 3 Technicians

Location: This platform is located in pavilions 5 and 6 of the Civil Hospital, in the Regenerative Medicine laboratory of the Regional University Hospital of Málaga, and in the laboratory on the 1st floor of the Virgen de la Victoria University Hospital.

HISTOLOGY

The main objective of this platform is to provide support and scientific-technical advising for the processing of histological samples in the field of biomedical research.

Services:

- Sample preparation:
 - Fixation using cryosubstitution and aldehydes
 - Embedding in paraffin, resin, or OCT
 - Histochemistry of basic stains
 - Immunohistochemistry for antibody tissue labeling

- Histological slices:
 - Using the EXaC hard section method
 - Using conventional paraffin microtomy
 - Using a cryostat for cryosections
- Image acquisition and processing:
 - Sample analysis advising
 - Automated image acquisition using a slide loader up to 40x in brightfield, darkfield, and polarization.
 - Fluorescence image acquisition.
 - Histomorphometry
 - Brightfield, fluorescence, or polarization image analysis.

Coordinator: Iván Durán

Personnel in 2024: 1 Technician

Main results 2024:

More than 100 conventional histology and EXaC projects, invoicing a total of €14,188.80, among which the following external projects stand out:

- Foundation for Health and Biomedicine Research in Málaga for the amount of €367.88.
- Foundation for Health Research Management of Seville for the amount of €2,804.00.
- Four non-IBIMA University of Málaga projects for amounts of €1,446.74, €1,979.07, €340.67, and €408.00.
- Biomedical Research Institute of Salamanca (IBSAL) for an amount of €79.20.
- Anapath Research SAU for an amount of €411.84.
- Networked Biomedical Research Center Consortium for an amount of €676.60.
- Jamones Segovia S.A. for an amount of €426.56.
- Celldrive 3D for an amount of €5,248.24.

DISSEMINATION:

IBIMA Plataforma BIONAND research conferences.

TEACHING SUPPORT:

On-demand personalized histology courses according to research projects.

Location: This platform is located in the IBIMA Plataforma BIONAND building in Málaga TechPark.

NANOIMAGING UNIT

The Nanoimaging Unit has been designed and optimized to provide highly varied, integrated technological support for biomedical research, with a special emphases on research based on nanotechnology, offering advanced services to internal and external users. This facility is accredited as a Singular Scientific and Technological Infrastructure (ICTS), as a node of the ICTS NANBIOSIS.

The unit brings together a wide range of state-of-the-art technologies and is divided into five departments, all of which are staffed by technical specialists:

- **Small animal preclinical imaging service.** Small animal (preclinical) imaging is a vital tool in biomedical research that allows for studying biological processes and potential drugs in animal models using non-invasive methods. This service offers some of the most relevant preclinical imaging types: magnetic resonance imaging (MRI), in vivo bioluminescence and fluorescence imaging (In vivo Xtreme), nuclear imaging (PET/SPECT), and X-ray computed tomography (CT). These techniques are essential for the preclinical evaluation and characterization of new diagnostic and therapeutic agents. The combined use of these technologies and new highly specific imaging probes are the basis of molecular imaging.
- **Magnetic resonance imaging (MRI).** This service is equipped with two high-resolution NMR spectrometers: a 400 MHz NMR spectrometer for routine experiments and a spectrometer with a larger magnetic field, 600 MHz, dedicated to high-resolution magic angle NMR spectroscopy (HR-MAS) and conventional spectroscopy of samples that require greater sensitivity. It also has a TD-NMR analyzer for low-field magnetic relaxivity measurements (1.44 T).
- **Electron Microscopy.** The service offers access to conventional transmission electron microscopy (TEM), Cryo-TEM and Tomography, and high-resolution environmental scanning electron microscopy (SEM). In addition, the service has an outstanding infrastructure for preparing samples through cryo-immobilization. All equipment has been optimized for biological and nanomedical applications. Although biological and medical applications are the main objective of this service, it can also be used in other scientific and engineering fields, including quality control studies, failure analysis, etc.
- **Optical microscopy.** This facility houses an excellent range of optical microscopy facilities designed to support high quality biomedical research. The equipment includes conventional, confocal, multiphoton, and super-resolution microscopes as well as advanced processing software, such as IMARIS.
- **Magnetometry.** This service has a vibrating sample magnetometer (VSM) for characterizing the magnetic properties (magnetization, coercivity, magnetic susceptibility, hysteresis loop) of various materials, including ferromagnetic, paramagnetic, diamagnetic, and superparamagnetic materials.
- In October 2024, the start-up of a Radioactive Facility (IRA3243) comprising 4 rooms was authorized:
- **Molecular Nuclear Imaging.** The PET/SPECT/CT equipment is located here
- **Quality control and radiopharmacy.** For the production of new radiopharmaceuticals and their quality controls.
- **X-rays:** Room with an irradiator and In vivo Xtreme bioluminescence, fluorescence, and X-ray equipment
- **Radiochemistry.** For the radioactive labeling of molecules.

The equipment included in the different services of the unit is listed below:

1. SMALL ANIMAL PRECLINICAL IMAGING SERVICE:

- **Bruker MRI 9.4T:** Multinuclear imaging and spectroscopy system. Magnetic resonance imaging (MRI) is a very versatile technique that offers excellent morphological, functional, and physiological information. In addition, significant advances made over the past few years in the development of highly sensitive

contrast agents using nanotechnology approaches have brought MRI into the field of molecular imaging.

- **Bruker Albira SI:** Trimodal positron emission tomography, single-photon emission computed tomography, and X-ray computed tomography (PET/SPECT/CT) system. Positron emission tomography (PET) is a non-invasive diagnostic technique that allows for taking images of the animal's body that show the activity and metabolism of the body's organs. Radioactively-labeled substances that are distributed throughout the body are used. Single-photon emission computed tomography (SPECT) uses gamma rays that produce radioactive **isotopes**. These isotopes are introduced into the animal's body as part of biologically active molecules. The procedure is similar to that of **positron emission tomography** (PET), but in SPECT, it is the isotope that directly produces the gamma ray, while in PET, the isotope produces a **positron** which is then annihilated by an **electron** to produce the two gamma rays. These two gamma rays exit in opposite directions and their simultaneous detection makes it possible to locate the isotope in a more precise manner than in SPECT. However, SPECT is simpler because it can use isotopes that are easier to obtain and have a longer **half-life**.

Computed tomography (CT) allows for taking high-quality 3D imaging of preclinical animal models based on the reconstruction of 2D X-ray images captured at different angles. Albira uses dedicated beds for mice and rats with built-in anesthetic gas. Different image-capturing modes allow users to balance capture time and image quality. The Albira software package automates the reconstruction process, while the PMOD software that is included allows users to perform advanced analysis and export data to popular formats such as DICOM. It allows for the possibility of combining CT data with fluorescence.

- **Bruker In-Vivo Xtreme:** Multimodal imaging system for rats and mice, BRUKER. The In-Vivo Xtreme is a multimodal optical and X-ray system for small animal imaging designed to combine sensitivity, speed, and flexibility for the widest range of molecular imaging applications. Equipped with a high-performance 58 mm f/1.3 lens and a 4MP back-illuminated CCD camera, the In-Vivo Xtreme is suitable for demanding intravital bioluminescence and fluorescence imaging challenges.

2. MAGNETIC RESONANCE SERVICE:

- **Bruker Avance 600 MHz NMR spectrometer:** High resolution spectrometer equipped with Prodigy TCI liquid cryoprobe, TXI room temperature probe, and HR-MAS (high-resolution magic angle spinning) probe. In biomedicine, the use of liquid state NMR studies has expanded from classical metabolic studies that use enriched stable isotope tracers to more recent applications in biofluid metabolomics (urine, plasma, CSF). Solid-state NMR, HR-MAS, allows for obtaining high-resolution spectra from intact tissue, i.e. without the need for any metabolite extraction procedure. HR-MAS spectroscopy is widely used for metabolomic studies, especially in cancer research, in which the metabolic profile (metabolome) of tumor biopsies can be characterized using only a few milligrams of intact tissue (tissue biopsy). The HR-MAS technique can also be used to characterize the structure and elucidate partially insoluble compounds.
- **Bruker Ascend 400 MHz NMR spectrometer:** High resolution spectrometer equipped with a BBFO Plus probe optimized for the direct detection of X-nuclei in the ^{31}P to ^{15}N range. Liquid NMR is a fundamental tool in both chemistry and biomedical research. Its applications in chemistry range from the elucidation of small molecule structures to studies of protein-ligand interactions.
- **Bruker Minispec (TD-RMN):** This piece of equipment allows for measuring magnetic relaxation times, T1 and T2, at clinical fields, 1.44T. Relaxation measurements are fundamental in characterizing the magnetic compounds developed as MRI contrast agents.

3. OPTICAL MICROSCOPY SERVICE:

- **Zeiss LSM980 NLO Multiphoton Confocal Microscope:** Multiphoton confocal microscope with conventional and resonant scanning. Multiphoton (or two-photon) microscopy takes advantage of the

near-simultaneous absorption of two or more photons that act to excite a fluorescent molecule with the combined energy of both photons. In practice, this means that low-energy infrared light can be used to see fluorescent molecules that are normally excited by high-energy blue and ultraviolet light. Using this method, fluorescent molecules can be visualized at much greater depths than with conventional microscopy. Infrared light is also much less damaging to living tissue than UV or blue excitation, making it ideal for viewing model organisms or tissue explants. The Zeiss LSM 980 NLO microscope combines confocal and multiphoton modes in one machine and it can easily switch between different modes.

- **Leica HyD SP5 Confocal Microscope:** Confocal microscope with conventional and resonant scanning. Confocal laser scanning microscopy is a very popular technique that uses a combination of laser illumination and a mask through a pinhole to ensure that only focal plane fluorescence reaches the detector. This avoids the characteristic blurring typical of conventional fluorescence microscopy and allows images to be captured as detailed optical slices and then used to build 3D models. Confocal microscopy is one of the most versatile techniques available in optical microscopy.
- **Nikon Eclipse TIRF/N-STORM fluorescence microscope:** This conventional fluorescent microscope is equipped with incubators for timelapse studies on live samples. Fluorescence microscopy offers a wide range of tools to visualize microscopic events. For many purposes, conventional widefield fluorescence microscopy remains the best choice. The CCD detectors used for conventional microscopy are usually more sensitive than the photomultiplier tubes used in confocal microscopes. As the camera captures the entire field of view simultaneously, it also allows for faster imaging. Examples where conventional microscopy may be more appropriate include visualization of individual molecules, receptors, or small organisms, such as bacteria and yeasts. The TIRF (Total Internal Reflection Fluorescence) technique combines the sensitivity of conventional fluorescence with selective illumination to enhance the contrast of features in close proximity to the coverslip. In addition, this equipment allows for performing super-resolution spectroscopy based on STORM (STochastic Optical Reconstruction Microscopy). Historically, the intrinsic diffraction of light has made it difficult to use fluorescence to distinguish structures less than 200 nm away. Super-resolution microscopy refers to techniques that selectively activate fluorescent molecules to map their position up to 10 times more accurately than conventional fluorescent microscopy. The Nikon N-Storm system is capable of locating molecules with a resolution of up to 20 nm.
- **Basic Nikon Eclipse Ti fluorescence microscope:** Conventional fluorescence microscope with incubators for timelapse studies on live samples.
- **Perkin Elmer Operetta HCS (High-Content Screening) equipment:** High-content screening (HCS) attempts to bridge the gap between microscopy and cytometry by providing large amounts of statistically useful and phenotypically rich data. High-content screening combines automated microscopy with customizable algorithms capable of detecting and quantifying many different types of phenotypic information in fixed and live cells. The HCS Operetta combines the quality of a spinning disk confocal microscope with Harmony HCS software, which contains many common algorithms such as nuclei and cell detection as well as the ability to detect complex phenotypes automatically using machine learning.

4. ELECTRON MICROSCOPY SERVICE:

- **Thermo Scientific-FEI Tecnai G2 20 Twin Transmission Electron Microscope:** In addition to the conventional applications of transmission electron microscopy, this equipment allows for more advanced studies, such as tomography-ET, cryo-ET, cryo-tomography, and EDS (Energy-Dispersive X-ray Spectroscopy).
- **Thermo Scientific-FEI Quanta 250 FEG Scanning Electron Microscope:** One of the most notable features of this equipment is that it is equipped to perform studies in environmental mode, ESEM (environmental scanning electron microscopy), wet-STEM (scanning transmission electron microscopy), and EDS (energy dispersive X-ray spectroscopy).

5. MAGNETOMETRY DEPARTMENT

- **VAM Lake Shore Cryotronics 8604 Magnetometer:** With this equipment, magnetization measurements at room temperature and as a function of temperature (between 2 and 400 K), determination of magnetic transition temperatures (Curie, Neel) in the previous range, magnetic granulometry for studies of small metallic particles and magnetic oxides; cyclic measurements of hysteresis; permeability; coercivity for soft materials; permanent magnets up to magnetic fields of 7 Teslas; and obtaining magnetization curves after cooling with and without a field (FC/ZFC curves).

6. SAMPLE PREPARATION ROOMS:

Electron Microscopy Service:

- Vitrobot Mark IV from Thermo Scientific-FEI, for sample preparation in aqueous solution for cryo-ET.
- LEICA EM UC7 Ultramicrotome, with LEICA EM FC7 cryoultramicrotomy module.
- LEICA EM AFS2 low-temperature freeze substitution and sample inclusion equipment with a LEICA EM FSP automatic reagent dispensing system.
- LEICA EM HPM 100 high-pressure freeze fixation equipment
- LEICA EM SCD 500 high-vacuum sample coating and metal coating system
- Glass knife preparation equipment for cryo-ultramicrotomy, LEICA EM KMR3 (cutting) and LEICA EM MP (mounting for collecting slices)
- LEICA DM 1000 conventional optical microscope
- LEICA S4 E stereomicroscope with LEICA L2 illumination system
- Laboratory for embedding samples in resin (shared use laboratory)

Nuclear Magnetic Resonance Service:

- Class II biosafety hood
- Cold room (common use area)

7. RADIOACTIVE EQUIPMENT ROOMS:

- **Precision X-RAD 220XL irradiator.** Compact cabinet X-ray irradiator for higher energy irradiation studies, ideal for delivering high doses in biology and materials science. This system can be used to irradiate in vivo (rats and mice) and in vitro (cell cultures) models.

Scientific Manager: Dr. María Luisa García Martín

Coordinator: Dr. Mónica Feijóo Cuaresma

Personnel in 2024: 5 Technicians

Main results 2024:

- A total of 56 requests were responded to, with a total turnover of €68,700.
- Thirty-four training activities were carried out.
- Ten teaching support activities were carried out.
- The unit was cited in 14 scientific articles published in 2024.
- More than 35 users belonging to 25 research groups used the Nanoimaging Unit's services.

Location: This platform is located in the IBIMA Plataforma BIONAND building in Málaga TechPark.

CHEMISTRY

The unit's mission is to provide services to researchers from the IBIMA Plataforma BIONAND and associated laboratories as well as to visitors from other research institutes. It also contributed to conducting research projects and promoting cooperation among groups.

This service offers infrastructure and equipment for the synthesis and physical and chemical characterization of molecules and nanomaterials as well as for the evaluation of their interaction with biological samples. The platform is equipped with:

- Particle Analyzer by Dynamic Light Scattering (DLS) Particle Analyzer Malvern Nano ZS90 ZetaSizer
- NTA, Nanoparticle Tracking Analysis
- Four-glove dry chamber
- Varian UV-Vis Absorption Spectrometer (CARY-100 BIO-MELT)
- PerkinElmer LS-55 Plate Fluorescence Spectrometer
- FT/IR Infrared Spectrometer Jasco PS-4000
- HPLC chromatograph with UV-Vis and refractive index detectors. JASCO LC-2000-PLUS
- FPLC chromatograph with UV-Vis and electrochemical detectors. JASCO UV-2075
- GPC WATERS chromatograph: gel permeation or molecular exclusion chromatograph with photo diode array UV-Vis spectrometry detector, refractive index detector, light scattering detector, and fraction collector.
- MBraun MB-SPS-800 5-solvent drying system
- Lan Technics Polarimeter
- Melting point meter
- Liberty Blue 2.0 Peptide Synthesizer
-

Scientific Manager: José Juan Reina

Location: IBIMA Plataforma BIONAND building in Málaga TechPark.

The IBIMA Plataforma BIONAND center has chemical synthesis laboratories duly equipped with safety cabins, rotary evaporators, safety cabinets, etc. The Chemistry Platform is located at IBIMA Plataforma BIONAND and comprises several facilities/spaces:

- General Chemistry Laboratory (floor 1)
- Chemistry Unit (floor -1).

Operation:

- User self-service (own use).
- You must log in to most equipment with a username/password.
- This requires prior user authorization by the person in charge of the unit (request by email) after confirming that the user has mastered and knows how to operate the equipment to be used.
- Access to the Chemistry Unit room requires authorization to enter with a card.
